

JSForm

Constants Summary

Number	#DEFAULT_ENCAPSULATION	The constants to set or get the encapsulation property of a JSForm.
Number	#HIDE_CONTROLLER_ENCAPSULATION	The constants to set or get the encapsulation property of a JSForm.
Number	#HIDE_DATAPROVIDERS_ENCAPSULATION	The constants to set or get the encapsulation property of a JSForm.
Number	#HIDE_ELEMENTS_ENCAPSULATION	The constants to set or get the encapsulation property of a JSForm.
Number	#HIDE_FOUNSET_ENCAPSULATION	The constants to set or get the encapsulation property of a JSForm.
Number	#LIST_VIEW	The constants to set or get the view property of a JSForm.
Number	#LOCKED_LIST_VIEW	The constants to set or get the view property of a JSForm.
Number	#LOCKED_RECORD_VIEW	The constants to set or get the view property of a JSForm.
Number	#LOCKED_TABLE_VIEW	The constants to set or get the view property of a JSForm.
Number	#MODULE_PRIVATE_ENCAPSULATION	The constants to set or get the encapsulation property of a JSForm.
Number	#PRIVATE_ENCAPSULATION	The constants to set or get the encapsulation property of a JSForm.
Number	#RECORD_VIEW	The constants to set or get the view property of a JSForm.

Property Summary

String	#borderType	The type, color and style of border of the component.
String	#dataSource	The names of the database server and table that this form is linked to.
String	#defaultPageFormat	The default page format for the form.
Number	#encapsulation	
JSForm	#extendsForm	A JSForm instance representing the super form of this form, if this form has a super form.
String	#initialSort	The default sort order only when the form loads.
String	#name	The name of the form.
String	#namedFoundSet	Property that tells the form to use a named foundset instead of the default foundset.
JSForm	#navigator	The navigator (previously named "controller") that is used to control/navigate to the form.
JSMETHOD	#onDeleteAllRecordsCmd	The method that overrides the Servoy menu item Select > Delete All.
JSMETHOD	#onDeleteRecordCmd	The method that overrides the Servoy menu item Select > Delete Record (or keyboard shortcut).
JSMETHOD	#onDrag	The method that is triggered when (non Design Mode) dragging occurs.
JSMETHOD	#onDragEnd	The method that is triggered when (non Design Mode) dragging end occurs.
JSMETHOD	#onDragOver	The method that is triggered when (non Design Mode) dragging over a component occurs.
JSMETHOD	#onDrop	The method that is triggered when (non Design Mode) dropping occurs.
JSMETHOD	#onDuplicateRecordCmd	The method that overrides the Servoy menu item Select > Duplicate Record (or keyboard shortcut).
JSMETHOD	#onElementFocusGained	The method that is triggered when focus is gained by a component inside the form.
JSMETHOD	#onElementFocusLost	The method that gets triggered when focus is lost by a component inside the form.
JSMETHOD	#onFindCmd	The method that overrides the Servoy menu item Select > Find (or keyboard shortcut) in Data (ready) mode.

JSMETHOD [#onHide](#)
The method that is triggered when another form is being activated.

JSMETHOD [#onInvertRecordsCmd](#)
The method that overrides the Servoy menu item Select > Invert Records.

JSMETHOD [#onLoad](#)
The method that is triggered when a form is loaded/reloaded from the repository; used to alter elements, set globals, hide toolbars, etc; onShow method can also be assigned.

JSMETHOD [#onNewRecordCmd](#)
The method that overrides the Servoy menu item Select > New Record (or keyboard shortcut).

JSMETHOD [#onNextRecordCmd](#)
The method that overrides the Servoy menu item Select > Next Record.

JSMETHOD [#onOmitRecordCmd](#)
The method that overrides the Servoy menu item Select > Omit Record.

JSMETHOD [#onPreviousRecordCmd](#)
The method that overrides the Servoy menu item Select > Previous Record.

JSMETHOD [#onPrintPreviewCmd](#)
The method that overrides the Servoy menu item File > Print Preview.

JSMETHOD [#onRecordEditStart](#)
The method that is triggered when a user clicks into a column on the form.

JSMETHOD [#onRecordEditStop](#)
The method that is triggered when a record is being saved.

JSMETHOD [#onRecordSelection](#)
The method that is triggered each time a record is selected.

JSMETHOD [#onRender](#)
The method that is executed when the component is rendered.

JSMETHOD [#onResize](#)
The method that gets triggered when resize occurs.

JSMETHOD [#onSearchCmd](#)
The method that overrides the Servoy menu item Select > Search (or keyboard shortcut) in Find mode.

JSMETHOD [#onShow](#)
The method that is triggered EVERY TIME the form is displayed; an argument must be passed to the method if this is the first time the form is displayed.

JSMETHOD [#onShowAllRecordsCmd](#)
The method that overrides the Servoy menu item Select > Show All (or keyboard shortcut).

JSMETHOD [#onShowOmittedRecordsCmd](#)
The method that overrides the Servoy menu item Select > Show Omitted Records.

JSMETHOD [#onSortCmd](#)
The method that overrides the Servoy menu item Select > Sort.

JSMETHOD [#onUnLoad](#)
The method that is triggered when a form is unloaded from the repository.

NUMBER [#paperPrintScale](#)
The percentage value the printed page is enlarged or reduced to; the size of the printed form is inversely proportional.

NUMBER [#scrollbars](#)
Scrollbar options for the vertical and horizontal scrollbars.

STRING [#serverName](#)
Get the server name used by this form.

BOOLEAN [#showInMenu](#)
When set, the form is displayed under the Window menu.

STRING [#styleClass](#)
The Cascading Style Sheet (CSS) class name applied to the form.

STRING [#styleName](#)
The name of the Servoy style that is being used on the form.

STRING [#tableName](#)
The [name of the table/SQL view].

STRING [#titleText](#)
The text that displays in the title bar of the form window.

BOOLEAN [#transparent](#)
When set, the form is transparent.

NUMBER [#view](#)
The default form view mode.

NUMBER [#width](#)
The width of the form in pixels.

Method Summary

JSBean [#getBean\(name\)](#)
Returns a JSBean that has the given name.

JSBean [#getBeans\(\)](#)
[] Returns all JSBeans of this form.

JSBean [#getBeans\(returnInheritedElements\)](#)
[] Returns all JSBeans of this form.

JSPart **#getBodyPart()**
Retrieves the Body part of the form.

JSButt **#getButton(name)**
on Returns a JSButton that has the given name.

JSButt **#getButtons()**
on[] Returns all JSButtons of this form, including the ones without a name.

JSButt **#getButtons(returnInheritedElements)**
on[] Returns all JSButtons of this form, including the ones without a name.

JSCo
mpone **#getComponent(name)**
nt Returns a JSCComponent that has the given name; if found it will be a JSField, JSLabel, JSButton, JSPortal, JSBean or JSTabPanel.

JSCo
mpone **#getComponents()**
nt[] Returns a array of all the JSCComponents that a form has; they are of type JSField,JSLabel,JSButton,JSPortal,JSBean or JSTabPanel.

JSCo
mpone **#getComponents(returnInheritedElements)**
nt[] Returns a array of all the JSCComponents that a form has; they are of type JSField,JSLabel,JSButton,JSPortal,JSBean or JSTabPanel.

JSField **#getField(name)**
The field with the specified name.

JSField**#getFields()**
[] Returns all JSField objects of this form, including the ones without a name.

JSField**#getFields(returnInheritedElements)**
[] Returns all JSField objects of this form, including the ones without a name.

JSPart **#getFooterPart()**
Retrieves the Footer part of the form.

JSMet **#getFormMethod(name)**
hod Gets an existing form method for the given name.

JSMet **#getFormMethods()**
hod[] Returns all existing form methods for this form.

JSMet **#getFormMethods(returnInheritedElements)**
hod[] Returns all existing form methods for this form.

JSVari **#getFormVariable(name)**
able Gets an existing form variable for the given name.

JSVari **#getFormVariables()**
able[] An array consisting of all form variables for this form.

JSVari **#getFormVariables(returnInheritedElements)**
able[] An array consisting of all form variables for this form.

JSPart **#getHeaderPart()**
Retrieves the Header part of the form.

JSLab **#getLabel(name)**
el Returns a JSLabel that has the given name.

JSLab **#getLabels()**
el[] Returns all JSLabels of this form (not including its super form), including the ones without a name.

JSLab **#getLabels(returnInheritedElements)**
el[] Returns all JSLabels of this form (optionally including it super forms labels), including the ones without a name.

JSPart **#getLeadingGrandSummaryPart()**
Retrieves the Leading Grand Summary part of the form.

JSPart **#getLeadingSubSummaryParts()**
[] Gets an array of the Leading Subsummary parts of the form, ordered by their height from top == 0 to bottom.

JSPart **#getPart(type)**
Gets a part of the form from the given type (see JSPart constants).

JSPart **#getPart(type, height)**
Gets a part of the form from the given type (see JSPart constants).

Numb **#getPartYOffset(type)**
er Returns the Y offset of a given part (see JSPart) of the form.

Numb **#getPartYOffset(type, height)**
er Returns the Y offset of a given part (see JSPart) of the form.

JSPart **#getParts()**
[] Gets all the parts from the form (not including the parts of the parent form), ordered by there height (lowerbound) property, from top == 0 to bottom.

JSPart **#getParts(returnInheritedElements)**
[] Gets all the parts from the form (optionally also from the parent form), ordered by there height (lowerbound) property, from top == 0 to bottom.

JSPort **#getPortal(name)**
al Returns a JSPortal that has the given name.

JSPort **#getPortals()**
al[] Returns all JSPortal objects of this form (not including the ones from the parent form), including the ones without a name.

JSPort **#getPortals(returnInheritedElements)**
al[] Returns all JSPortal objects of this form (optionally also the ones from the parent form), including the ones without a name.

JSTab **#getTabPanel(name)**
Panel Returns a JSTabPanel that has the given name.

JSTab **#getTabPanels()**
Panel[] Returns all JSTabPanels of this form (not including the ones from the parent form), including the ones without a name.

JSTab **#getTabPanels(returnInheritedElements)**
Panel[] Returns all JSTabPanels of this form (optionally including the ones from the parent form), including the ones without a name.

JSPart [#getTitleFooterPart\(\)](#)
Retrieves the Title Footer part of the form.

JSPart [#getTitleHeaderPart\(\)](#)
Retrieves the Title Header part of the form.

JSPart [#getTrailingGrandSummaryPart\(\)](#)
Retrieves the Trailing Grand Summary part of the form.

JSPart [#getTrailingSubSummaryParts\(\)](#)
[] Gets an array of the Trailing Subsummary parts of the form, ordered by their height from top == 0 to bottom.

UUID [#getUUID\(\)](#)
Returns the UUID of this form.

JSPart [#newBean\(name, className, x, y, width, height\)](#)
Creates a new JSBean object on the form - including the name of the JSBean object; the classname the JSBean object is based on, the "x" and "y" position of the JSBean object in pixels, as well as the width and height of the JSBean object in pixels.

JSButt [#newButton\(text, x, y, width, height, jsmethod\)](#)
on Creates a new button on the form with the given text, place, size and JSMethod as the onAction event triggered action.

JSPart [#newCalendar\(dataprovidername/jsvariable, x, y, width, height\)](#)
Creates a new JSField object on the form with the displayType of CALENDAR - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

JSPart [#newCheck\(dataprovidername/jsvariable, x, y, width, height\)](#)
Creates a new JSField object on the form with the displayType of CHECK (checkbox) - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

JSPart [#newComboBox\(dataprovidername/jsvariable, x, y, width, height\)](#)
Creates a new JSField object on the form with the displayType of COMBOBOX - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

JSPart [#newField\(dataprovidername/jsvariable, displaytype, x, y, width, height\)](#)
Creates a new JSField object on the form - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

JSPart [#newFooterPart\(\)](#)
Creates a new Footer part on the form.

JSMet [#newFormMethod\(code\)](#)
hod Creates a new form JSMethod - based on the specified code.

JSVari [#newFormVariable\(name, type\)](#)
able Creates a new form JSVariable - based on the name of the variable object and the number type, uses the SolutionModel JSVariable constants.

JSPart [#newHeaderPart\(\)](#)
Creates a new Header part on the form.

JSPart [#newHtmlArea\(dataprovidername/jsvariable, x, y, width, height\)](#)
Creates a new JSField object on the form with the displayType of HTML_AREA - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

JSPart [#newImageMedia\(dataprovidername/jsvariable, x, y, width, height\)](#)
Creates a new JSField object on the form with the displayType of IMAGE_MEDIA - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

JSLab [#newLabel\(txt, x, y, width, height\)](#)
el Creates a new JSLabel object on the form - including the text of the label, the "x" and "y" position of the label object in pixels, the width and height of the label object in pixels.

JSLab [#newLabel\(txt, x, y, width, height, action\)](#)
el Creates a new JSLabel object on the form - including the text of the label, the "x" and "y" position of the label object in pixels, the width and height of the label object in pixels and a JSMethod action such as the method for an onAction event.

JSPart [#newLeadingGrandSummaryPart\(\)](#)
Creates a new Leading Grand Summary part on the form.

JSPart [#newLeadingSubSummaryPart\(\)](#)
Creates a new Leading Subsummary part on the form.

JSPart [#newPart\(type, height\)](#)
Creates a new part on the form.

JSPart [#newPassword\(dataprovidername/jsvariable, x, y, width, height\)](#)
Creates a new JSField object on the form with the displayType of PASSWORD - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

JSPort [#newPortal\(name, relation, x, y, width, height\)](#)
al Creates a new JSPortal object on the form - including the name of the JSPortal object; the relation the JSPortal object is based on, the "x" and "y" position of the JSPortal object in pixels, as well as the width and height of the JSPortal object in pixels.

JSPart [#newRadios\(dataprovidername/jsvariable, x, y, width, height\)](#)
Creates a new JSField object on the form with the displayType of RADIOS (radio buttons) - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

JSPart [#newRtfArea\(dataprovidername/jsvariable, x, y, width, height\)](#)
Creates a new JSField object on the form with the displayType of RTF_AREA (enables more than one line of text to be displayed in a field) - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

JSTab [#newTabPanel\(name, x, y, width, height\)](#)
Panel Creates a new JSTabPanel object on the form - including the name of the JSTabPanel object, the "x" and "y" position of the JSTabPanel object in pixels, as well as the width and height of the JSTabPanel object in pixels.

JSPart [#newTextArea\(dataprovidername/jsvariable, x, y, width, height\)](#)
Creates a new JSField object on the form with the displayType of TEXT_AREA - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

`#newTextField(dataprovidername/jsvariable, x, y, width, height)`
JSField Creates a new JSField object on the form with the displayType of TEXT_FIELD - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

`#newTitleFooterPart()`
JSPart Creates a new Title Footer part on the form.

`#newTitleHeaderPart()`
JSPart Creates a new Title Header part on the form.

`#newTrailingGrandSummaryPart()`
JSPart Creates a new Trailing Grand Summary part on the form.

`#newTrailingSubSummaryPart()`
JSPart Creates a new Trailing Subsummary part on the form.

`#newTypeAhead(dataprovidername/jsvariable, x, y, width, height)`
JSField Creates a new JSField object on the form with the displayType of TYPE_AHEAD - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

`#removeBean(name)`
Boolean Removes a JSBean that has the specified name.

`#removeButton(name)`
Boolean Removes a JSButton that has the specified name.

`#removeComponent(name)`
Boolean Removes a component (JLabel, JSButton, JSField, JSPortal, JSBean, JSTabpanel) that has the given name.

`#removeField(name)`
Boolean Removes a JSField that has the given name.

`#removeLabel(name)`
Boolean Removes a JLabel that has the given name.

`#removePart(type)`
Boolean Removes a JSPart of the given type.

`#removePart(type, height)`
Boolean Removes a JSPart of the given type.

`#removePortal(name)`
Boolean Removes a JSPortal that has the given name.

`#removeTabPanel(name)`
Boolean Removes a JSTabPanel that has the given name.

Constants Details

DEFAULT_ENCAPSULATION

The constants to set or get the encapsulation property of a JSForm.

They are as follows: JSForm.DEFAULT_ENCAPSULATION, JSForm.PRIVATE_ENCAPSULATION, JSForm.MODULE_PRIVATE_ENCAPSULATION, JSForm.HIDE_DATAPROVIDERS_ENCAPSULATION, JSForm.HIDE_FOUNSET_ENCAPSULATION, JSForm.HIDE_CONTROLLER_ENCAPSULATION, JSForm.HIDE_ELEMENTS_ENCAPSULATION

Returns

Number

Sample

```
var myDefaultForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', 'myStyleName', false, 800, 600);
    myDefaultForm.encapsulation = JSForm.DEFAULT_ENCAPSULATION;

    var myPrivateForm = solutionModel.newForm('newForm2', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myPrivateForm.encapsulation = JSForm.PRIVATE_ENCAPSULATION;

    var myModulePrivateForm = solutionModel.newForm('newForm3', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myModulePrivateForm.encapsulation = JSForm.MODULE_PRIVATE_ENCAPSULATION;

    var myHideDataprovidersForm = solutionModel.newForm('newForm4', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myHideDataprovidersForm.encapsulation = JSForm.HIDE_DATAPROVIDERS_ENCAPSULATION;

    var myHideFoundsetForm = solutionModel.newForm('newForm5', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myHideFoundsetForm.encapsulation = JSForm.HIDE_FOUNSET_ENCAPSULATION;

    var myHideControllerForm = solutionModel.newForm('newForm6', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myHideControllerForm.encapsulation = JSForm.HIDE_CONTROLLER_ENCAPSULATION;

    var myHideElementsForm = solutionModel.newForm('newForm7', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myHideElementsForm.encapsulation = JSForm.HIDE_ELEMENTS_ENCAPSULATION;
```

HIDE_CONTROLLER_ENCAPSULATION

The constants to set or get the encapsulation property of a JSForm.

They are as follows: JSForm.DEFAULT_ENCAPSULATION, JSForm.PRIVATE_ENCAPSULATION, JSForm.MODULE_PRIVATE_ENCAPSULATION, JSForm.HIDE_DATAPROVIDERS_ENCAPSULATION, JSForm.HIDE_FOUNSET_ENCAPSULATION, JSForm.HIDE_CONTROLLER_ENCAPSULATION, JSForm.HIDE_ELEMENTS_ENCAPSULATION

Returns

Number

Sample

```
var myDefaultForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', 'myStyleName', false, 800, 600);
    myDefaultForm.encapsulation = JSForm.DEFAULT_ENCAPSULATION;

    var myPrivateForm = solutionModel.newForm('newForm2', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myPrivateForm.encapsulation = JSForm.PRIVATE_ENCAPSULATION;

    var myModulePrivateForm = solutionModel.newForm('newForm3', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myModulePrivateForm.encapsulation = JSForm.MODULE_PRIVATE_ENCAPSULATION;

    var myHideDataprovidersForm = solutionModel.newForm('newForm4', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myHideDataprovidersForm.encapsulation = JSForm.HIDE_DATAPROVIDERS_ENCAPSULATION;

    var myHideFoundsetForm = solutionModel.newForm('newForm5', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myHideFoundsetForm.encapsulation = JSForm.HIDE_FOUNSET_ENCAPSULATION;

    var myHideControllerForm = solutionModel.newForm('newForm6', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myHideControllerForm.encapsulation = JSForm.HIDE_CONTROLLER_ENCAPSULATION;

    var myHideElementsForm = solutionModel.newForm('newForm7', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myHideElementsForm.encapsulation = JSForm.HIDE_ELEMENTS_ENCAPSULATION;
```

HIDE_DATAPROVIDERS_ENCAPSULATION

The constants to set or get the encapsulation property of a JSForm.

They are as follows: JSForm.DEFAULT_ENCAPSULATION, JSForm.PRIVATE_ENCAPSULATION, JSForm.MODULE_PRIVATE_ENCAPSULATION, JSForm.HIDE_DATAPROVIDERS_ENCAPSULATION, JSForm.HIDE_FOUNSET_ENCAPSULATION, JSForm.HIDE_CONTROLLER_ENCAPSULATION, JSForm.HIDE_ELEMENTS_ENCAPSULATION

Returns

Number

Sample

```
var myDefaultForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', 'myStyleName', false, 800, 600);
    myDefaultForm.encapsulation = JSForm.DEFAULT_ENCAPSULATION;

    var myPrivateForm = solutionModel.newForm('newForm2', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myPrivateForm.encapsulation = JSForm.PRIVATE_ENCAPSULATION;

    var myModulePrivateForm = solutionModel.newForm('newForm3', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myModulePrivateForm.encapsulation = JSForm.MODULE_PRIVATE_ENCAPSULATION;

    var myHideDataprovidersForm = solutionModel.newForm('newForm4', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myHideDataprovidersForm.encapsulation = JSForm.HIDE_DATAPROVIDERS_ENCAPSULATION;

    var myHideFoundsetForm = solutionModel.newForm('newForm5', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myHideFoundsetForm.encapsulation = JSForm.HIDE_FOUNSET_ENCAPSULATION;

    var myHideControllerForm = solutionModel.newForm('newForm6', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myHideControllerForm.encapsulation = JSForm.HIDE_CONTROLLER_ENCAPSULATION;

    var myHideElementsForm = solutionModel.newForm('newForm7', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myHideElementsForm.encapsulation = JSForm.HIDE_ELEMENTS_ENCAPSULATION;
```

HIDE_ELEMENTS_ENCAPSULATION

The constants to set or get the encapsulation property of a JSForm.

They are as follows: JSForm.DEFAULT_ENCAPSULATION, JSForm.PRIVATE_ENCAPSULATION, JSForm.MODULE_PRIVATE_ENCAPSULATION, JSForm.HIDE_DATAPROVIDERS_ENCAPSULATION, JSForm.HIDE_FOUNSET_ENCAPSULATION, JSForm.HIDE_CONTROLLER_ENCAPSULATION, JSForm.HIDE_ELEMENTS_ENCAPSULATION

Returns

Number

Sample

```
var myDefaultForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', 'myStyleName', false, 800, 600);
    myDefaultForm.encapsulation = JSForm.DEFAULT_ENCAPSULATION;

    var myPrivateForm = solutionModel.newForm('newForm2', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myPrivateForm.encapsulation = JSForm.PRIVATE_ENCAPSULATION;

    var myModulePrivateForm = solutionModel.newForm('newForm3', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myModulePrivateForm.encapsulation = JSForm.MODULE_PRIVATE_ENCAPSULATION;

    var myHideDataprovidersForm = solutionModel.newForm('newForm4', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myHideDataprovidersForm.encapsulation = JSForm.HIDE_DATAPROVIDERS_ENCAPSULATION;

    var myHideFoundsetForm = solutionModel.newForm('newForm5', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myHideFoundsetForm.encapsulation = JSForm.HIDE_FOUNSET_ENCAPSULATION;

    var myHideControllerForm = solutionModel.newForm('newForm6', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myHideControllerForm.encapsulation = JSForm.HIDE_CONTROLLER_ENCAPSULATION;

    var myHideElementsForm = solutionModel.newForm('newForm7', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myHideElementsForm.encapsulation = JSForm.HIDE_ELEMENTS_ENCAPSULATION;
```

HIDE_FOUNSET_ENCAPSULATION

The constants to set or get the encapsulation property of a JSForm.

They are as follows: JSForm.DEFAULT_ENCAPSULATION, JSForm.PRIVATE_ENCAPSULATION, JSForm.MODULE_PRIVATE_ENCAPSULATION, JSForm.HIDE_DATAPROVIDERS_ENCAPSULATION, JSForm.HIDE_FOUNSET_ENCAPSULATION, JSForm.HIDE_CONTROLLER_ENCAPSULATION, JSForm.HIDE_ELEMENTS_ENCAPSULATION

Returns

Number

Sample

```
var myDefaultForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', 'myStyleName', false, 800, 600);
    myDefaultForm.encapsulation = JSForm.DEFAULT_ENCAPSULATION;

    var myPrivateForm = solutionModel.newForm('newForm2', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myPrivateForm.encapsulation = JSForm.PRIVATE_ENCAPSULATION;

    var myModulePrivateForm = solutionModel.newForm('newForm3', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myModulePrivateForm.encapsulation = JSForm.MODULE_PRIVATE_ENCAPSULATION;

    var myHideDataprovidersForm = solutionModel.newForm('newForm4', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myHideDataprovidersForm.encapsulation = JSForm.HIDE_DATAPROVIDERS_ENCAPSULATION;

    var myHideFoundsetForm = solutionModel.newForm('newForm5', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myHideFoundsetForm.encapsulation = JSForm.HIDE_FOUNSET_ENCAPSULATION;

    var myHideControllerForm = solutionModel.newForm('newForm6', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myHideControllerForm.encapsulation = JSForm.HIDE_CONTROLLER_ENCAPSULATION;

    var myHideElementsForm = solutionModel.newForm('newForm7', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myHideElementsForm.encapsulation = JSForm.HIDE_ELEMENTS_ENCAPSULATION;
```

LIST_VIEW

The constants to set or get the view property of a JSForm.

They are as follows: JSForm.LIST_VIEW, JSForm.LOCKED_LIST_VIEW, JSForm.LOCKED_RECORD_VIEW, JSForm.LOCKED_TABLE_VIEW, JSForm.RECORD_VIEW.

Returns

Number

Sample

```
var myListViewForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', 'myStyleName', false, 800, 600);
    myListViewForm.view = JSForm.LIST_VIEW;

    var myLockedListViewForm = solutionModel.newForm('newForm2', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedListViewForm.view = JSForm.LOCKED_LIST_VIEW;

    var myLockedRecordViewForm = solutionModel.newForm('newForm3', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedRecordViewForm.view = JSForm.LOCKED_RECORD_VIEW;

    var myLockedTableViewForm = solutionModel.newForm('newForm4', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedTableViewForm.view = JSForm.LOCKED_TABLE_VIEW;

    var myRecordViewForm = solutionModel.newForm('newForm5', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myRecordViewForm.view = JSForm.RECORD_VIEW;
```

LOCKED_LIST_VIEW

The constants to set or get the view property of a JSForm.

They are as follows: JSForm.LIST_VIEW, JSForm.LOCKED_LIST_VIEW, JSForm.LOCKED_RECORD_VIEW, JSForm.LOCKED_TABLE_VIEW, JSForm.RECORD_VIEW.

Returns

Number

Sample

```
var myListViewForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', 'myStyleName', false, 800, 600);
    myListViewForm.view = JSForm.LIST_VIEW;

    var myLockedListViewForm = solutionModel.newForm('newForm2', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedListViewForm.view = JSForm.LOCKED_LIST_VIEW;

    var myLockedRecordViewForm = solutionModel.newForm('newForm3', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedRecordViewForm.view = JSForm.LOCKED_RECORD_VIEW;

    var myLockedTableViewForm = solutionModel.newForm('newForm4', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedTableViewForm.view = JSForm.LOCKED_TABLE_VIEW;

    var myRecordViewForm = solutionModel.newForm('newForm5', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myRecordViewForm.view = JSForm.RECORD_VIEW;
```

LOCKED_RECORD_VIEW

The constants to set or get the view property of a JSForm.

They are as follows: JSForm.LIST_VIEW, JSForm.LOCKED_LIST_VIEW, JSForm.LOCKED_RECORD_VIEW, JSForm.LOCKED_TABLE_VIEW, JSForm.RECORD_VIEW.

Returns

Number

Sample

```
var myListViewForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', 'myStyleName', false, 800, 600);
    myListViewForm.view = JSForm.LIST_VIEW;

    var myLockedListViewForm = solutionModel.newForm('newForm2', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedListViewForm.view = JSForm.LOCKED_LIST_VIEW;

    var myLockedRecordViewForm = solutionModel.newForm('newForm3', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedRecordViewForm.view = JSForm.LOCKED_RECORD_VIEW;

    var myLockedTableViewForm = solutionModel.newForm('newForm4', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedTableViewForm.view = JSForm.LOCKED_TABLE_VIEW;

    var myRecordViewForm = solutionModel.newForm('newForm5', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myRecordViewForm.view = JSForm.RECORD_VIEW;
```

LOCKED_TABLE_VIEW

The constants to set or get the view property of a JSForm.

They are as follows: JSForm.LIST_VIEW, JSForm.LOCKED_LIST_VIEW, JSForm.LOCKED_RECORD_VIEW, JSForm.LOCKED_TABLE_VIEW, JSForm.RECORD_VIEW.

Returns

Number

Sample

```
var myListViewForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', 'myStyleName', false, 800, 600);
    myListViewForm.view = JSForm.LIST_VIEW;

    var myLockedListViewForm = solutionModel.newForm('newForm2', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedListViewForm.view = JSForm.LOCKED_LIST_VIEW;

    var myLockedRecordViewForm = solutionModel.newForm('newForm3', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedRecordViewForm.view = JSForm.LOCKED_RECORD_VIEW;

    var myLockedTableViewForm = solutionModel.newForm('newForm4', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedTableViewForm.view = JSForm.LOCKED_TABLE_VIEW;

    var myRecordViewForm = solutionModel.newForm('newForm5', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myRecordViewForm.view = JSForm.RECORD_VIEW;
```

MODULE_PRIVATE_ENCAPSULATION

The constants to set or get the encapsulation property of a JSForm.

They are as follows: JSForm.DEFAULT_ENCAPSULATION, JSForm.PRIVATE_ENCAPSULATION, JSForm.MODULE_PRIVATE_ENCAPSULATION, JSForm.HIDE_DATAPROVIDERS_ENCAPSULATION, JSForm.HIDE_FOUNDSET_ENCAPSULATION, JSForm.HIDE_CONTROLLER_ENCAPSULATION, JSForm.HIDE_ELEMENTS_ENCAPSULATION

Returns

Number

Sample

```
var myDefaultForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', 'myStyleName', false, 800, 600);
    myDefaultForm.encapsulation = JSForm.DEFAULT_ENCAPSULATION;

    var myPrivateForm = solutionModel.newForm('newForm2', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myPrivateForm.encapsulation = JSForm.PRIVATE_ENCAPSULATION;

    var myModulePrivateForm = solutionModel.newForm('newForm3', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myModulePrivateForm.encapsulation = JSForm.MODULE_PRIVATE_ENCAPSULATION;

    var myHideDataprovidersForm = solutionModel.newForm('newForm4', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myHideDataprovidersForm.encapsulation = JSForm.HIDE_DATAPROVIDERS_ENCAPSULATION;

    var myHideFoundsetForm = solutionModel.newForm('newForm5', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myHideFoundsetForm.encapsulation = JSForm.HIDE_FOUNDSET_ENCAPSULATION;

    var myHideControllerForm = solutionModel.newForm('newForm6', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myHideControllerForm.encapsulation = JSForm.HIDE_CONTROLLER_ENCAPSULATION;

    var myHideElementsForm = solutionModel.newForm('newForm7', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myHideElementsForm.encapsulation = JSForm.HIDE_ELEMENTS_ENCAPSULATION;
```

PRIVATE_ENCAPSULATION

The constants to set or get the encapsulation property of a JSForm.

They are as follows: JSForm.DEFAULT_ENCAPSULATION, JSForm.PRIVATE_ENCAPSULATION, JSForm.MODULE_PRIVATE_ENCAPSULATION, JSForm.HIDE_DATAPROVIDERS_ENCAPSULATION, JSForm.HIDE_FOUNSET_ENCAPSULATION, JSForm.HIDE_CONTROLLER_ENCAPSULATION, JSForm.HIDE_ELEMENTS_ENCAPSULATION

Returns

Number

Sample

```
var myDefaultForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', 'myStyleName', false, 800, 600);
    myDefaultForm.encapsulation = JSForm.DEFAULT_ENCAPSULATION;

    var myPrivateForm = solutionModel.newForm('newForm2', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myPrivateForm.encapsulation = JSForm.PRIVATE_ENCAPSULATION;

    var myModulePrivateForm = solutionModel.newForm('newForm3', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myModulePrivateForm.encapsulation = JSForm.MODULE_PRIVATE_ENCAPSULATION;

    var myHideDataprovidersForm = solutionModel.newForm('newForm4', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myHideDataprovidersForm.encapsulation = JSForm.HIDE_DATAPROVIDERS_ENCAPSULATION;

    var myHideFoundsetForm = solutionModel.newForm('newForm5', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myHideFoundsetForm.encapsulation = JSForm.HIDE_FOUNSET_ENCAPSULATION;

    var myHideControllerForm = solutionModel.newForm('newForm6', 'myServer', 'myTable', 'myStyleName', false, 800,
600);
    myHideControllerForm.encapsulation = JSForm.HIDE_CONTROLLER_ENCAPSULATION;

    var myHideElementsForm = solutionModel.newForm('newForm7', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myHideElementsForm.encapsulation = JSForm.HIDE_ELEMENTS_ENCAPSULATION;
```

RECORD_VIEW

The constants to set or get the view property of a JSForm.

They are as follows: JSForm.LIST_VIEW, JSForm.LOCKED_LIST_VIEW, JSForm.LOCKED_RECORD_VIEW, JSForm.LOCKED_TABLE_VIEW, JSForm.RECORD_VIEW.

Returns

Number

Sample

```
var myListViewForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', 'myStyleName', false, 800, 600);
    myListViewForm.view = JSForm.LIST_VIEW;

    var myLockedListViewForm = solutionModel.newForm('newForm2', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedListViewForm.view = JSForm.LOCKED_LIST_VIEW;

    var myLockedRecordViewForm = solutionModel.newForm('newForm3', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedRecordViewForm.view = JSForm.LOCKED_RECORD_VIEW;

    var myLockedTableViewForm = solutionModel.newForm('newForm4', 'myServer', 'myTable', 'myStyleName',
false, 800, 600);
    myLockedTableViewForm.view = JSForm.LOCKED_TABLE_VIEW;

    var myRecordViewForm = solutionModel.newForm('newForm5', 'myServer', 'myTable', 'myStyleName', false,
800, 600);
    myRecordViewForm.view = JSForm.RECORD_VIEW;
```

Property Details

borderType

The type, color and style of border of the component.

Returns

[String](#)

Sample

```
//HINT: To know exactly the notation of this property set it in the designer and then read it once out through the solution model.
var field = form.newField('my_table_text', JSField.TEXT_FIELD, 10, 10, 100, 20);
field.borderType = solutionModel.createBorder(1,'#ff0000');
```

dataSource

The names of the database server and table that this form is linked to.

Returns

[String](#)

Sample

```
var myForm = solutionModel.newForm('newForm', 'aServer', 'aTable', 'aStyleName', false, 800, 600)
myForm.dataSource = 'db:/anotherServerName/anotherTableName'
```

defaultPageFormat

The default page format for the form.

Returns

[String](#)

Sample

```
var form = solutionModel.getForm("someForm");
application.output(form.defaultPageFormat);
form.defaultPageFormat = solutionModel.createPageFormat(612,792,72,72,72,72,SM_ORIENTATION.PORTRAIT,SM_UNITS.PIXELS)
```

encapsulation

Replace with description

Returns

[Number](#)

Sample

```
var myForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
myForm.encapsulation = JSForm.HIDE_CONTROLLER_ENCAPSULATION;
```

extendsForm

A JSForm instance representing the super form of this form, if this form has a super form.

Returns

[JSForm](#)

Sample

```
var subForm = solutionModel.newForm('childForm', 'myServer', 'myTable', null, true, 800, 600);
var superForm = solutionModel.newForm('childForm', 'myServer', 'myTable', null, true, 800, 600);
subForm.extendsForm = superForm;
```

initialSort

The default sort order only when the form loads.

This is applied each time an internal SQL query is being executed (find, find-all, open form); and is only executed when no other manual sort has been performed on the foundset.

Returns

[String](#)

Sample

```
var form = solutionModel.newForm('myForm', 'myServer', 'myTable', null, true, 800, 600);
form.initialSort = "column1 desc, column2 asc, column3 asc";
```

name

The name of the form.

Returns

[String](#)

Sample

```
var form = solutionModel.newForm('myForm', 'myServer', 'myTable', null, true, 800, 600);
var formName = form.name;
application.output(formName);
```

namedFoundSet

Property that tells the form to use a named foundset instead of the default foundset.

When "separate" as special value is specified the form will always create a copy of assigned foundset and therefor become separated from other foundsets

Returns

[String](#)

Sample

```
// form with separate foundset
var frmSeparate = solutionModel.newForm('products_separate', 'example_data', 'products', null, true,
640, 480);
frmSeparate.newLabel("Separate FoundSet", 10, 10, 200, 20);
frmSeparate.newField('categoryid', JSField.TEXT_FIELD, 10, 40, 200, 20);
frmSeparate.newField('productname', JSField.TEXT_FIELD, 10, 70, 200, 20);
frmSeparate.namedFoundSet = 'separate';
forms['products_separate'].controller.find();
forms['products_separate'].categoryid = '=2';
forms['products_separate'].controller.search();
// form with empty foundset
var frmEmpty = solutionModel.newForm('products_empty', 'example_data', 'products', null, true, 640,
480);
frmEmpty.newLabel("Empty FoundSet", 10, 10, 200, 20);
frmEmpty.newField('categoryid', JSField.TEXT_FIELD, 10, 40, 200, 20);
frmEmpty.newField('productname', JSField.TEXT_FIELD, 10, 70, 200, 20);
frmEmpty.namedFoundSet = 'empty';
```

navigator

The navigator (previously named "controller") that is used to control/navigate to the form. The navigator is shown at the left or at the right side of the form, depending on the page orientation.

The following options are available:

-none- - no navigator is assigned.

DEFAULT - the Servoy default navigator is assigned.

IGNORE - the navigator last assigned to a previous form.

Custom - a custom navigator based on a selected form.

Returns

[JSForm](#)

Sample

```
var aForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
// you can also use SM_DEFAULTS.INGORE to just reuse the navigator that is already set, or SM_DEFAULTS.DEFAULT
to have the default servoy navigator.
// here we assign an other new form as the navigator.
var aNavigator = solutionModel.newForm('navForm', 'myServer', 'myTable', null, false, 800, 600);
// set the navigators navigator to NONE
aNavigator.navigator = SM_DEFAULTS.NONE; // Hide the navigator on the form.
myListViewForm.navigator = aNavigator;
application.output(myListViewForm.navigator.name);
```

onDeleteAllRecordsCmd

The method that overrides the Servoy menu item Select > Delete All.

This property is automatically set to "DEFAULT" (no override) when the form is created.

Returns

[JSMethod](#)

Sample

```
form.onNewRecordCmd = form.newFormMethod('function onNewRecordCmd(event) { application.output("onNewRecordCmd
intercepted on " + event.getFormName()); }');
form.onDuplicateRecordCmd = form.newFormMethod('function onDuplicateRecordCmd(event) { application.output
("onDuplicateRecordCmd intercepted on " + event.getFormName()); }');
form.onDeleteRecordCmd = form.newFormMethod('function onDeleteRecordCmd(event) { application.output
("onDeleteRecordCmd intercepted on " + event.getFormName()); }');
form.onDeleteAllRecordsCmd = form.newFormMethod('function onDeleteAllRecordsCmd(event) { application.output
("onDeleteAllRecordsCmd intercepted on " + event.getFormName()); }');
```

onDeleteRecordCmd

The method that overrides the Servoy menu item Select > Delete Record (or keyboard shortcut).

This property is automatically set to "DEFAULT" (no override) when the form is created.

Returns

[JSMethod](#)

Sample

```
form.onNewRecordCmd = form.newFormMethod('function onNewRecordCmd(event) { application.output("onNewRecordCmd
intercepted on " + event.getFormName()); }');
form.onDuplicateRecordCmd = form.newFormMethod('function onDuplicateRecordCmd(event) { application.output
("onDuplicateRecordCmd intercepted on " + event.getFormName()); }');
form.onDeleteRecordCmd = form.newFormMethod('function onDeleteRecordCmd(event) { application.output
("onDeleteRecordCmd intercepted on " + event.getFormName()); }');
form.onDeleteAllRecordsCmd = form.newFormMethod('function onDeleteAllRecordsCmd(event) { application.output
("onDeleteAllRecordsCmd intercepted on " + event.getFormName()); }');
```

onDrag

The method that is triggered when (non Design Mode) dragging occurs.

Returns

[JSMethod](#)

Sample

```
form.onDrag = form.newFormMethod('function onDrag(event) { application.output("onDrag intercepted from " + event.getSource()); }');
form.onDragEnd = form.newFormMethod('function onDragEnd(event) { application.output("onDragEnd intercepted from " + event.getSource()); }');
form.onDragOver = form.newFormMethod('function onDragOver(event) { application.output("onDragOver intercepted from " + event.getSource()); }');
form.onDrop = form.newFormMethod('function onDrop(event) { application.output("onDrop intercepted from " + event.getSource()); }');
```

onDragEnd

The method that is triggered when (non Design Mode) dragging end occurs.

Returns

[JSMethod](#)

Sample

```
form.onDrag = form.newFormMethod('function onDrag(event) { application.output("onDrag intercepted from " + event.getSource()); }');
form.onDragEnd = form.newFormMethod('function onDragEnd(event) { application.output("onDragEnd intercepted from " + event.getSource()); }');
form.onDragOver = form.newFormMethod('function onDragOver(event) { application.output("onDragOver intercepted from " + event.getSource()); }');
form.onDrop = form.newFormMethod('function onDrop(event) { application.output("onDrop intercepted from " + event.getSource()); }');
```

onDragOver

The method that is triggered when (non Design Mode) dragging over a component occurs.

Returns

[JSMethod](#)

Sample

```
form.onDrag = form.newFormMethod('function onDrag(event) { application.output("onDrag intercepted from " + event.getSource()); }');
form.onDragEnd = form.newFormMethod('function onDragEnd(event) { application.output("onDragEnd intercepted from " + event.getSource()); }');
form.onDragOver = form.newFormMethod('function onDragOver(event) { application.output("onDragOver intercepted from " + event.getSource()); }');
form.onDrop = form.newFormMethod('function onDrop(event) { application.output("onDrop intercepted from " + event.getSource()); }');
```

onDrop

The method that is triggered when (non Design Mode) dropping occurs.

Returns

[JSMethod](#)

Sample

```
form.onDrag = form.newFormMethod('function onDrag(event) { application.output("onDrag intercepted from " + event.getSource()); }');
form.onDragEnd = form.newFormMethod('function onDragEnd(event) { application.output("onDragEnd intercepted from " + event.getSource()); }');
form.onDragOver = form.newFormMethod('function onDragOver(event) { application.output("onDragOver intercepted from " + event.getSource()); }');
form.onDrop = form.newFormMethod('function onDrop(event) { application.output("onDrop intercepted from " + event.getSource()); }');
```

onDuplicateRecordCmd

The method that overrides the Servoy menu item Select > Duplicate Record (or keyboard shortcut). This property is automatically set to "DEFAULT" (no override) when the form is created.

Returns

[JSMethod](#)

Sample

```
form.onNewRecordCmd = form.newFormMethod('function onNewRecordCmd(event) { application.output("onNewRecordCmd intercepted on " + event.getFormName()); }');
form.onDuplicateRecordCmd = form.newFormMethod('function onDuplicateRecordCmd(event) { application.output("onDuplicateRecordCmd intercepted on " + event.getFormName()); }');
form.onDeleteRecordCmd = form.newFormMethod('function onDeleteRecordCmd(event) { application.output("onDeleteRecordCmd intercepted on " + event.getFormName()); }');
form.onDeleteAllRecordsCmd = form.newFormMethod('function onDeleteAllRecordsCmd(event) { application.output("onDeleteAllRecordsCmd intercepted on " + event.getFormName()); }');
```

onElementFocusGained

The method that is triggered when focus is gained by a component inside the form.

Returns

[JSMethod](#)

Sample

```
form.onElementFocusGained = form.newFormMethod('function onElementFocusGained(event) { application.output("onElementFocusGained intercepted from " + event.getSource()); }');
form.onElementFocusLost = form.newFormMethod('function onElementFocusLost(event) { application.output("onElementFocusLost intercepted from " + event.getSource()); }');
```

onElementFocusLost

The method that gets triggered when focus is lost by a component inside the form.

Returns

[JSMethod](#)

Sample

```
form.onElementFocusGained = form.newFormMethod('function onElementFocusGained(event) { application.output("onElementFocusGained intercepted from " + event.getSource()); }');
form.onElementFocusLost = form.newFormMethod('function onElementFocusLost(event) { application.output("onElementFocusLost intercepted from " + event.getSource()); }');
```

onFindCmd

The method that overrides the Servoy menu item Select > Find (or keyboard shortcut) in Data (ready) mode. This property is automatically set to "DEFAULT" (no override) when the form is created.

Returns

[JSMethod](#)

Sample

```
form.onFindCmd = form.newFormMethod('function onFindCmd(event) { application.output("onFindCmd intercepted on " + event.getFormName()); }');
form.onSearchCmd = form.newFormMethod('function onSearchCmd(event) { application.output("onSearchCmd intercepted on " + event.getFormName()); }');
form.onShowAllRecordsCmd = form.newFormMethod('function onShowAllRecordsCmd(event) { application.output("onShowAllRecordsCmd intercepted on " + event.getFormName()); }');
```

onHide

The method that is triggered when another form is being activated.

NOTE: If the onHide method returns false, the form can be prevented from hiding.

For example, when using onHide with showFormInDialog, the form will not close by clicking the dialog close box (X).

Returns

[JSMethod](#)

Sample

```
form.onShow = form.newFormMethod('function onShow(firstShow, event) { application.output("onShow intercepted on " + event.getFormName() + ". first show? " + firstShow); return false; }');
form.onHide = form.newFormMethod('function onHide(event) { application.output("onHide blocked on " + event.getFormName()); return false; }');
```

onInvertRecordsCmd

The method that overrides the Servoy menu item Select > Invert Records.

This property is automatically set to "DEFAULT" (no override) when the form is created.

Returns

[JSMethod](#)

Sample

```
form.onOmitRecordCmd = form.newFormMethod('function onOmitRecordCmd(event) { application.output("onOmitRecordCmd intercepted on " + event.getFormName()); }');
form.onShowOmittedRecordsCmd = form.newFormMethod('function onShowOmittedRecordsCmd(event) { application.output("onShowOmittedRecordsCmd intercepted on " + event.getFormName()); }');
form.onInvertRecordsCmd = form.newFormMethod('function onInvertRecordsCmd(event) { application.output("onInvertRecordsCmd intercepted on " + event.getFormName()); }');
```

onLoad

The method that is triggered when a form is loaded/reloaded from the repository; used to alter elements, set globals, hide toolbars, etc; onShow method can also be assigned.

NOTE: onShow should be used to access current foundset dataproviders; onLoad cannot be used because the foundset data is not loaded until after the form is loaded.

Also calls to loadRecords() should be done in the onShow method and not in the onLoad method

If you call loadRecords() in the onShow method, you may want to set the namedFoundSet property of the form to 'empty' to prevent the first default form query.

NOTE: the onLoad event bubbles down, meaning that the onLoad is first fired on the parent then on a tab in a tabpanel (and in tab of that tab panels if you are 3 deep)

Returns

[JSMethod](#)

Sample

```
form.onLoad = form.newFormMethod('function onLoad(event) { application.output("onLoad intercepted on " + event.getFormName()); }');
form.onUnLoad = form.newFormMethod('function onUnLoad(event) { application.output("onUnLoad intercepted on " + event.getFormName()); }');
```

onNewRecordCmd

The method that overrides the Servoy menu item Select > New Record (or keyboard shortcut).

This property is automatically set to "DEFAULT" (no override) when the form is created.

Returns

[JSMethod](#)

Sample

```
form.onNewRecordCmd = form.newFormMethod('function onNewRecordCmd(event) { application.output("onNewRecordCmd intercepted on " + event.getFormName()); }');
form.onDuplicateRecordCmd = form.newFormMethod('function onDuplicateRecordCmd(event) { application.output("onDuplicateRecordCmd intercepted on " + event.getFormName()); }');
form.onDeleteRecordCmd = form.newFormMethod('function onDeleteRecordCmd(event) { application.output("onDeleteRecordCmd intercepted on " + event.getFormName()); }');
form.onDeleteAllRecordsCmd = form.newFormMethod('function onDeleteAllRecordsCmd(event) { application.output("onDeleteAllRecordsCmd intercepted on " + event.getFormName()); }');
```

onNextRecordCmd

The method that overrides the Servoy menu item Select > Next Record.
This property is automatically set to "DEFAULT" (no override) when the form is created.

Returns

[JSMethod](#)

Sample

```
form.onPreviousRecordCmd = form.newFormMethod('function onPreviousRecordCmd(event) { application.output
("onPreviousRecordCmd intercepted on " + event.getFormName()); }');
form.onNextRecordCmd = form.newFormMethod('function onNextRecordCmd(event) { application.output
("onNextRecordCmd intercepted on " + event.getFormName()); }');
```

onOmitRecordCmd

The method that overrides the Servoy menu item Select > Omit Record.
This property is automatically set to "DEFAULT" (no override) when the form is created.

Returns

[JSMethod](#)

Sample

```
form.onOmitRecordCmd = form.newFormMethod('function onOmitRecordCmd(event) { application.output
("onOmitRecordCmd intercepted on " + event.getFormName()); }');
form.onShowOmittedRecordsCmd = form.newFormMethod('function onShowOmittedRecordsCmd(event) { application.output
("onShowOmittedRecordsCmd intercepted on " + event.getFormName()); }');
form.onInvertRecordsCmd = form.newFormMethod('function onInvertRecordsCmd(event) { application.output
("onInvertRecordsCmd intercepted on " + event.getFormName()); }');
```

onPreviousRecordCmd

The method that overrides the Servoy menu item Select > Previous Record.
This property is automatically set to "DEFAULT" (no override) when the form is created.

Returns

[JSMethod](#)

Sample

```
form.onPreviousRecordCmd = form.newFormMethod('function onPreviousRecordCmd(event) { application.output
("onPreviousRecordCmd intercepted on " + event.getFormName()); }');
form.onNextRecordCmd = form.newFormMethod('function onNextRecordCmd(event) { application.output
("onNextRecordCmd intercepted on " + event.getFormName()); }');
```

onPrintPreviewCmd

The method that overrides the Servoy menu item File > Print Preview.
This property is automatically set to "DEFAULT" (no override) when the form is created.

Returns

[JSMethod](#)

Sample

```
form.onPrintPreviewCmd = form.newFormMethod('function onPrintPreviewCmd(event) { application.output
("onPrintPreviewCmd intercepted on " + event.getFormName()); }');
```

onRecordEditStart

The method that is triggered when a user clicks into a column on the form.

NOTE: There is a small "e" displayed in the lower left side of the Servoy Client screen in the status area at the bottom of the window when the record is being edited.

Returns

[JSMethod](#)

Sample

```
form.onRecordEditStart = form.newFormMethod('function onRecordEditStart(event) { application.output
("onRecordEditStart intercepted on " + event.getFormName()); }');
form.onRecordEditStop = form.newFormMethod('function onRecordEditStop(record, event) { application.output
("onRecordEditStop intercepted on " + event.getFormName() + ". record is: " + record); }');
form.onRecordSelection = form.newFormMethod('function onRecordSelection(event) { application.output
("onRecordSelection intercepted on " + event.getFormName()); }');
```

onRecordEditStop

The method that is triggered when a record is being saved.

A record is saved when a user clicks out of it (for example on an empty part of the layout or to another form); can return false (for example as part of a validation) where a condition must be changed to return true.

NOTE: The name of this property has been changed from onRecordSave.

Returns

[JSMethod](#)

Sample

```
form.onRecordEditStart = form.newFormMethod('function onRecordEditStart(event) { application.output
("onRecordEditStart intercepted on " + event.getFormName()); }');
form.onRecordEditStop = form.newFormMethod('function onRecordEditStop(record, event) { application.output
("onRecordEditStop intercepted on " + event.getFormName() + ". record is: " + record); }');
form.onRecordSelection = form.newFormMethod('function onRecordSelection(event) { application.output
("onRecordSelection intercepted on " + event.getFormName()); }');
```

onRecordSelection

The method that is triggered each time a record is selected.

If a form is in List view or Special table view - when the user clicks on it.

In Record view - after the user navigates to another record using the slider or clicks up or down for next/previous record.

NOTE: Data and Servoy tag values are returned when the onRecordSelection method is executed.

Returns

[JSMethod](#)

Sample

```
form.onRecordEditStart = form.newFormMethod('function onRecordEditStart(event) { application.output
("onRecordEditStart intercepted on " + event.getFormName()); }');
form.onRecordEditStop = form.newFormMethod('function onRecordEditStop(record, event) { application.output
("onRecordEditStop intercepted on " + event.getFormName() + ". record is: " + record); }');
form.onRecordSelection = form.newFormMethod('function onRecordSelection(event) { application.output
("onRecordSelection intercepted on " + event.getFormName()); }');
```

onRender

The method that is executed when the component is rendered.

Returns

[JSMethod](#)

Sample

```
form.onRender = form.newFormMethod('function onRender(event) { event.getElement().bgcolor = \'#00ff00\' }');
```

onResize

The method that gets triggered when resize occurs.

Returns

[JSMethod](#)

Sample

```
form.onResize = form.newFormMethod('function onResize(event) { application.output("onResize intercepted on " + event.getFormName()); }');
```

onSearchCmd

The method that overrides the Servoy menu item Select > Search (or keyboard shortcut) in Find mode. This property is automatically set to "DEFAULT" (no override) when the form is created.

Returns

[JSMethod](#)

Sample

```
form.onFindCmd = form.newFormMethod('function onFindCmd(event) { application.output("onFindCmd intercepted on " + event.getFormName()); }');
form.onSearchCmd = form.newFormMethod('function onSearchCmd(event) { application.output("onSearchCmd intercepted on " + event.getFormName()); }');
form.onShowAllRecordsCmd = form.newFormMethod('function onShowAllRecordsCmd(event) { application.output("onShowAllRecordsCmd intercepted on " + event.getFormName()); }');
```

onShow

The method that is triggered EVERY TIME the form is displayed; an argument must be passed to the method if this is the first time the form is displayed.

NOTE: onShow can be used to access current foundset data providers; onLoad cannot be used because the foundset data is not loaded until after the form is loaded.

NOTE: the onShow event bubbles down, meaning that the onShow event of a form displayed in a tabPanel is fired after the onShow event of the parent.

Returns

[JSMethod](#)

Sample

```
form.onShow = form.newFormMethod('function onShow(firstShow, event) { application.output("onShow intercepted on " + event.getFormName() + ". first show? " + firstShow); return false; }');
form.onHide = form.newFormMethod('function onHide(event) { application.output("onHide blocked on " + event.getFormName()); return false; }');
```

onShowAllRecordsCmd

The method that overrides the Servoy menu item Select > Show All (or keyboard shortcut). This property is automatically set to "DEFAULT" (no override) when the form is created.

Returns

[JSMethod](#)

Sample

```
form.onFindCmd = form.newFormMethod('function onFindCmd(event) { application.output("onFindCmd intercepted on " + event.getFormName()); }');
form.onSearchCmd = form.newFormMethod('function onSearchCmd(event) { application.output("onSearchCmd intercepted on " + event.getFormName()); }');
form.onShowAllRecordsCmd = form.newFormMethod('function onShowAllRecordsCmd(event) { application.output("onShowAllRecordsCmd intercepted on " + event.getFormName()); }');
```

onShowOmittedRecordsCmd

The method that overrides the Servoy menu item Select > Show Omitted Records.
This property is automatically set to "DEFAULT" (no override) when the form is created.

Returns

[JSMethod](#)

Sample

```
form.onOmitRecordCmd = form.newFormMethod('function onOmitRecordCmd(event) { application.output
("onOmitRecordCmd intercepted on " + event.getFormName()); }');
form.onShowOmittedRecordsCmd = form.newFormMethod('function onShowOmittedRecordsCmd(event) { application.output
("onShowOmittedRecordsCmd intercepted on " + event.getFormName()); }');
form.onInvertRecordsCmd = form.newFormMethod('function onInvertRecordsCmd(event) { application.output
("onInvertRecordsCmd intercepted on " + event.getFormName()); }');
```

onSortCmd

The method that overrides the Servoy menu item Select > Sort.
This property is automatically set to "DEFAULT" (no override) when the form is created.

Returns

[JSMethod](#)

Sample

```
form.onSortCmd = form.newFormMethod('function onSortCmd(dataProviderID, asc, event) { application.output
("onSortCmd intercepted on " + event.getFormName() + ". data provider: " + dataProviderID + ". asc: " + asc);
}');
```

onUnLoad

The method that is triggered when a form is unloaded from the repository.

NOTE: Forms can be prevented from being removed from memory by referencing the form object in a global variable or inside an array inside a global variable. Do take care using this technique.

Forms take up memory and if too many forms are in memory and cannot be unloaded, there is a possibility of running out of memory.

Returns

[JSMethod](#)

Sample

```
form.onLoad = form.newFormMethod('function onLoad(event) { application.output("onLoad intercepted on " + event.
getFormName()); }');
form.onUnLoad = form.newFormMethod('function onUnLoad(event) { application.output("onUnLoad intercepted on " +
event.getFormName()); }');
```

paperPrintScale

The percentage value the printed page is enlarged or reduced to; the size of the printed form is inversely proportional. For example, if the paperPrintScale is 50, the printed form will be enlarged 200%.

Returns

[Number](#)

Sample

```
var form = solutionModel.newForm('myForm', 'myServer', 'myTable', null, true, 800, 600);
if (form.paperPrintScale < 100)
    form.paperPrintScale = 100;
```

scrollbars

Scrollbar options for the vertical and horizontal scrollbars. Each of the vertical and horizontal scrollbars can be configured to display all the time, to display only when needed or to never display.

Returns

Number

Sample

```
var form = solutionModel.newForm('myForm', 'myServer', 'myTable', null, true, 1000, 600);
form.scrollbars = SM_SCROLLBAR.VERTICAL_SCROLLBAR_NEVER;
forms['newForm1'].controller.show();
```

serverName

Get the server name used by this form.

Returns

String

Sample

```
var form = solutionModel.newForm('myForm', 'myServer', 'myTable', null, true, 800, 600);
form.serverName = 'anotherServerName';
var theServerName = form.getServerName();
application.output(theServerName);
```

showInMenu

When set, the form is displayed under the Window menu.

If it is not set, the form will be 'hidden'.

NOTE: This is only applicable for Servoy Client. Servoy Developer always shows all forms so that developers have access to all forms within a solution during development.

Returns

Boolean

Sample

```
var aForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
var anotherForm= solutionModel.newForm('newForm2', 'myServer', 'myTable', null, true, 800, 600);
//using 'anotherForm' as navigator for aForm
anotherForm.showInMenu = false;
anotherForm.navigator = null;
aForm.navigator = anotherForm;
application.output(aForm.navigator.name);
```

styleClass

The Cascading Style Sheet (CSS) class name applied to the form.

Returns

String

Sample

```
var aForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
if (aForm.styleClass == null)
    aForm.styleClass = someStyleClass;
else
    application.output("The Cascading Style Sheet (CSS) class name applied to this form is " + aForm.
styleClass);
```

styleName

The name of the Servoy style that is being used on the form.

Returns

String

Sample

```
var aForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
if (aForm.styleName == null)
    aForm.styleName = someServoyStyleName;
else
    application.output("The name of the Servoy style that is being used on the form is " + aForm.styleName);
```

tableName

The [name of the table/SQL view].[the name of the database server connection] the form is based on.

Returns

String

Sample

```
var aForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
aForm.tableName = 'anotherTableOfMine'
if (forms['newForm1'].controller.find())
{
    columnTextDataProvider = '=aSearchedValue'
    columnNumberDataProvider = '>10';
    forms['newForm1'].controller.search()
}
```

titleText

The text that displays in the title bar of the form window.

NOTE: Data tags and Servoy tags can be used as part of the title text.

Returns

String

Sample

```
var myForm = solutionModel.newForm('newForm', 'aServer', 'aTable', 'aStyleName', false, 800, 600)
forms['newForm'].controller.show();
if (myForm.titleText == null)
{
    myForm.titleText = "My new title text should be really cool!"
    forms['newForm'].controller.recreateUI();
}
else
    application.output("My text text is already cool");
```

transparent

When set, the form is transparent.

Returns

Boolean

Sample

```
var form = solutionModel.newForm('myForm', 'myServer', 'myTable', null, true, 1000, 800);
if (form.transparent == false)
{
    var style = solutionModel.newStyle('myStyle', 'form { background-color: yellow; }');
    style.text = style.text + 'field { background-color: blue; }';
    form.styleName = 'myStyle';
}
var field = form.newField('columnTextDataProvider', JSField.TEXT_FIELD, 100, 100, 100, 50);
forms['myForm'].controller.show();
```

view

The default form view mode.

The view can be changed using a method at runtime. The following views are available:

- Record view
- List view
- Record view (locked)
- List view (locked)
- Table View (locked)

NOTE: Only Table View (locked) uses asynchronous related data loading.

This feature defers all related foundset data loading to the background - enhancing the visual display of a related foundset.

Returns

Number

Sample

```
var myForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
myForm.view = JSForm.RECORD_VIEW;
forms['newForm1'].controller.show();
```

width

The width of the form in pixels.

Returns

Number

Sample

```
var myForm = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
    forms['newForm1'].controller.show();
    myForm.width = 120;
    forms['newForm1'].controller.recreateUI();
```

Method Details

getBean

JSBean **getBean**(name)

Returns a JSBean that has the given name.

Parameters

{String} name – the specified name of the bean

Returns

JSBean – a JSBean object

Sample

```
var btn = myForm.getBean("mybean");
application.output(mybean.className);
```

getBeans

JSBean[] **getBeans**()

Returns all JSBeans of this form.

Returns

JSBean[] – the list of all JSbuttons on this forms

Sample

```
var beans = myForm.getBeans();
for (var b in beans)
{
    if (beans[b].name != null)
        application.output(beans[b].name);
}
```

getBeans

JSBean[] **getBeans**(returnInheritedElements)

Returns all JSBeans of this form.

Parameters

{[Boolean](#)} returnInheritedElements – true to also return the elements from parent form

Returns

[JSBean](#)[] – the list of all JSbuttons on this forms

Sample

```
var beans = myForm.getBeans();
for (var b in beans)
{
    if (beans[b].name != null)
        application.output(beans[b].name);
}
```

getBodyPart

[JSPart](#) **getBodyPart()**

Retrieves the Body part of the form.

Returns

[JSPart](#) – A JSPart instance corresponding to the Body part of the form.

Sample

```
form.getBodyPart().background = 'blue';
```

getButton

[JSButton](#) **getButton(name)**

Returns a JSButton that has the given name.

Parameters

{[String](#)} name – the specified name of the button

Returns

[JSButton](#) – a JSButton object

Sample

```
var btn = myForm.getButton("hello");
application.output(btn.text);
```

getButtons

[JSButton](#)[] **getButtons()**

Returns all JSButtons of this form, including the ones without a name.

Returns

[JSButton](#)[] – the list of all JSbuttons on this forms

Sample

```
var buttons = myForm.getButtons();
for (var b in buttons)
{
    if (buttons[b].name != null)
        application.output(buttons[b].name);
    else
        application.output(buttons[b].text + " has no name ");
}
```

getButtons

[JSButton](#)[] **getButtons(returnInheritedElements)**

Returns all JSButtons of this form, including the ones without a name.

Parameters

{[Boolean](#)} returnInheritedElements – true to also return the elements from parent form

Returns

[JSButton](#)[] – the list of all JSbuttons on this forms

Sample

```
var buttons = myForm.getButtons();
for (var b in buttons)
{
    if (buttons[b].name != null)
        application.output(buttons[b].name);
    else
        application.output(buttons[b].text + " has no name ");
}
```

getComponent

[JSComponent](#) **getComponent**(name)

Returns a JSComponent that has the given name; if found it will be a JSField, JSLabel, JSButton, JSPortal, JSBean or JSTabPanel.

Parameters

{String} name – the specified name of the component

Returns

[JSComponent](#) – a JSComponent object (might be a JSField, JSLabel, JSButton, JSPortal, JSBean or JSTabPanel)

Sample

```
var frm = solutionModel.getForm("myForm");
var cmp = frm.getComponent("componentName");
application.output("Component type and name: " + cmp);
```

getComponents

[JSComponent](#)[] **getComponents**()

Returns an array of all the JSComponents that a form has; they are of type JSField, JSLabel, JSButton, JSPortal, JSBean or JSTabPanel.

Returns

[JSComponent](#)[] – an array of all the JSComponents on the form.

Sample

```
var form = solutionModel.getForm("myForm");
var components = form.getComponents();
for (var i in components)
    application.output("Component type and name: " + components[i]);
```

getComponents

[JSComponent](#)[] **getComponents**(returnInheritedElements)

Returns an array of all the JSComponents that a form has; they are of type JSField, JSLabel, JSButton, JSPortal, JSBean or JSTabPanel.

Parameters

{Boolean} returnInheritedElements – true to also return the elements from the parent form

Returns

[JSComponent](#)[] – an array of all the JSComponents on the form.

Sample

```
var form = solutionModel.getForm("myForm");
var components = form.getComponents();
for (var i in components)
    application.output("Component type and name: " + components[i]);
```

getField

[JSField](#) **getField**(name)

The field with the specified name.

Parameters

{String} name – the specified name of the field

Returns

[JSField](#) – a JSField object

Sample

```
var form = solutionModel.getForm("myForm");
var field = form.getField("myField");
application.output(field.dataProviderID);
```

getFields

[JSField\[\]](#) **getFields()**

Returns all JSField objects of this form, including the ones without a name.

Returns

[JSField\[\]](#) – all JSField objects of this form

Sample

```
var frm = solutionModel.getForm("myForm");
var fields = frm.getFields();
for (var f in fields)
{
    var fname = fields[f].name;
    if (fname != null)
        application.output(fname);
}
```

getFields

[JSField\[\]](#) **getFields(returnInheritedElements)**

Returns all JSField objects of this form, including the ones without a name.

Parameters

[Boolean](#) returnInheritedElements – true to also return the elements from the parent form

Returns

[JSField\[\]](#) – all JSField objects of this form

Sample

```
var frm = solutionModel.getForm("myForm");
var fields = frm.getFields();
for (var f in fields)
{
    var fname = fields[f].name;
    if (fname != null)
        application.output(fname);
}
```

getFooterPart

[JSPart](#) **getFooterPart()**

Retrieves the Footer part of the form.

Returns

[JSPart](#) – A JSPart instance corresponding to the Footer part of the form.

Sample

```
form.getFooterPart().background = 'magenta';
```

getFormMethod

[JSMMethod](#) **getFormMethod(name)**

Gets an existing form method for the given name.

Parameters

[String](#) name – the specified name of the method

Returns

[JSMMethod](#) – a JSMMethod object (or null if the method with the specified name does not exist)

Sample

```
var frm = solutionModel.getForm("myForm");
var method = frm.getFormMethod("myMethod");
application.output(method.code);
```

getFormMethods

[JSMethod\[\]](#) **getFormMethods()**

Returns all existing form methods for this form.

Returns

[JSMethod\[\]](#) – all form methods for the form

Sample

```
var frm = solutionModel.getForm("myForm");
var methods = frm.getFormMethods();
for (var m in methods)
    application.output(methods[m].getName());
```

getFormMethods

[JSMethod\[\]](#) **getFormMethods(returnInheritedElements)**

Returns all existing form methods for this form.

Parameters

[{Boolean}](#) returnInheritedElements – true to also return the elements from the parent form

Returns

[JSMethod\[\]](#) – all form methods for the form

Sample

```
var frm = solutionModel.getForm("myForm");
var methods = frm.getFormMethods();
for (var m in methods)
    application.output(methods[m].getName());
```

getFormVariable

[JSVariable](#) **getFormVariable(name)**

Gets an existing form variable for the given name.

Parameters

[{String}](#) name – the specified name of the variable

Returns

[JSVariable](#) – a JSVariable object

Sample

```
var frm = solutionModel.getForm("myForm");
var fvariable = frm.getFormVariable("myVarName");
application.output(fvariable.name + " has the default value of " + fvariable.defaultValue);
```

getFormVariables

[JSVariable\[\]](#) **getFormVariables()**

An array consisting of all form variables for this form.

Returns

[JSVariable\[\]](#) – an array of all variables on this form

Sample

```
var frm = solutionModel.getForm("myForm");
var variables = frm.getFormVariables();
for (var i in variables)
    application.output(variables[i].name);
```

getFormVariables

[JSVariable\[\]](#) **getFormVariables(returnInheritedElements)**

An array consisting of all form variables for this form.

Parameters

{[Boolean](#)} returnInheritedElements – true to also return the elements from the parent form

Returns

[JSVariable](#)[] – an array of all variables on this form

Sample

```
var frm = solutionModel.getForm("myForm");
    var variables = frm.getFormVariables();
    for (var i in variables)
        application.output(variables[i].name);
```

getHeaderPart

[JSPart](#) **getHeaderPart()**

Retrieves the Header part of the form.

Returns

[JSPart](#) – A JSPart instance corresponding to the Header part of the form.

Sample

```
form.getHeaderPart().background = 'orange';
```

getLabel

[JSLabel](#) **getLabel(name)**

Returns a JSLabel that has the given name.

Parameters

{[String](#)} name – the specified name of the label

Returns

[JSLabel](#) – a JSLabel object (or null if the label with the specified name does not exist)

Sample

```
var frm = solutionModel.getForm("myForm");
    var label = frm.getLabel("myLabel");
    application.output(label.text);
```

getLabels

[JSLabel](#)[] **getLabels()**

Returns all JSLabels of this form (not including its super form), including the ones without a name.

Returns

[JSLabel](#)[] – all JSLabels on this form

Sample

```
var frm = solutionModel.getForm("myForm");
    var labels = frm.getLabels();
    for (var i in labels)
    {
        var lname = labels[i].name;
        if (lname != null)
            application.output(lname);
    }
```

getLabels

[JSLabel](#)[] **getLabels(returnInheritedElements)**

Returns all JSLabels of this form (optionally including its super forms labels), including the ones without a name.

Parameters

{[Boolean](#)} returnInheritedElements – true to also return the elements from parent form

Returns

[JSLabel](#)[] – all JSLabels on this form

Sample

```
var frm = solutionModel.getForm("myForm");
var labels = frm.getLabels();
for (var i in labels)
{
    var lname = labels[i].name;
    if (lname != null)
        application.output(lname);
}
```

getLeadingGrandSummaryPart

JSPart **getLeadingGrandSummaryPart()**

Retrieves the Leading Grand Summary part of the form.

Returns

JSPart – A JSPart instance corresponding to the Leading Grand Summary part of the form.

Sample

```
form.getLeadingGrandSummaryPart().background = 'yellow';
```

getLeadingSubSummaryParts

JSPart[] **getLeadingSubSummaryParts()**

Gets an array of the Leading Subsummary parts of the form, ordered by their height from top == 0 to bottom.

Returns

JSPart[] – An array of JSPart instances corresponding to the Leading Subsummary parts of the form.

Sample

```
form.getLeadingSubSummaryParts()[0].background = 'green';
```

getPart

JSPart **getPart(type)**

Gets a part of the form from the given type (see JSPart constants).

Parameters

{**Number**} type – The type of the part to retrieve.

Returns

JSPart – A JSPart instance representing the retrieved form part.

Sample

```
form.getPart(JSPart.HEADER).background = 'red';
form.getPart(JSPart.LEADING_SUBSUMMARY, 160).background = 'red';
```

getPart

JSPart **getPart(type, height)**

Gets a part of the form from the given type (see JSPart constants).

Use the height if you want to get a specific LEADING_SUBSUMMARY or TRAILING_SUBSUMMARY.

Parameters

{**Number**} type – The type of the part to retrieve.

{**Number**} height – The height of the part to retrieve. Use this parameter when retrieving one of multiple Leading/Trailing Subsummary parts.

Returns

JSPart – A JSPart instance representing the retrieved form part.

Sample

```
form.getPart(JSPart.HEADER).background = 'red';
form.getPart(JSPart.LEADING_SUBSUMMARY, 160).background = 'red';
```

getPartYOffset

Number **getPartYOffset(type)**

Returns the Y offset of a given part (see JSPart) of the form. This will include all the super forms parts if this form extends a form.

Parameters

{**Number**} type – The type of the part whose Y offset will be returned.

Returns

Number – A number holding the Y offset of the specified form part.

Sample

```
// get the subform
var form = solutionModel.getForm('SubForm');
// get the start offset of the body
var height = form.getPartYOffset(JSPart.BODY);
// place a new button based on the start offset.
form.newButton('mybutton',50,50+height,80,20,solutionModel.getGlobalMethod('test'));
```

getPartYOffset

Number **getPartYOffset**(type, height)

Returns the Y offset of a given part (see JSPart) of the form. This will include all the super forms parts if this form extends a form. Use the height parameter for targeting one of multiple subsummary parts.

Parameters

{**Number**} type – The type of the part whose Y offset will be returned.

{**Number**} height – The height of the part whose Y offset will be returned. This is used when one of multiple Leading/Trailing Sumsummary parts is retrieved.

Returns

Number – A number holding the Y offset of the specified form part.

Sample

```
// get the subform
var form = solutionModel.getForm('SubForm');
// get the start offset of the body
var height = form.getPartYOffset(JSPart.BODY);
// place a new button based on the start offset.
form.newButton('mybutton',50,50+height,80,20,solutionModel.getGlobalMethod('test'));
```

getParts

JSPart[] **getParts**()

Gets all the parts from the form (not including the parts of the parent form), ordered by there height (lowerbound) property, from top == 0 to bottom.

Returns

JSPart[] – An array of JSPart instances corresponding to the parts of the form.

Sample

```
var allParts = form.getParts()
for (var i=0; i<allParts.length; i++) {
    if (allParts[i].getPartType() == JSPart.BODY)
        application.output('body Y offset: ' + allParts[i].getPartYOffset());
}
```

getParts

JSPart[] **getParts**(returnInheritedElements)

Gets all the parts from the form (optionally also from the parent form), ordered by there height (lowerbound) property, from top == 0 to bottom.

Parameters

{**Boolean**} returnInheritedElements – true to also return the parts from parent form

Returns

JSPart[] – An array of JSPart instances corresponding to the parts of the form.

Sample

```
var allParts = form.getParts()
for (var i=0; i<allParts.length; i++) {
    if (allParts[i].getPartType() == JSPart.BODY)
        application.output('body Y offset: ' + allParts[i].getPartYOffset());
}
```

getPortal

JSPortal **getPortal**(name)

Returns a JSPortal that has the given name.

Parameters

{**String**} name – the specified name of the portal

Returns

[JSPortal](#) – a JSPortal object

Sample

```
var frm = solutionModel.getForm("myForm");
    var portal = frm.getPortal("myPortal");
    portal.initialSort = 'my_table_text desc';
```

getPortals

[JSPortal\[\]](#) **getPortals()**

Returns all JSPortal objects of this form (not including the ones from the parent form), including the ones without a name.

Returns

[JSPortal\[\]](#) – an array of all JSPortal objects on this form

Sample

```
var frm = solutionModel.getForm("myForm");
    var portals = frm.getPortals();
    for (var i in portals)
    {
        var p = portals[i];
        if (p.name != null)
            application.output(p.name);
        else
            application.output("unnamed portal detected");
    }
```

getPortals

[JSPortal\[\]](#) **getPortals(returnInheritedElements)**

Returns all JSPortal objects of this form (optionally also the ones from the parent form), including the ones without a name.

Parameters

{[Boolean](#)} returnInheritedElements – true to also return the elements from parent form

Returns

[JSPortal\[\]](#) – an array of all JSPortal objects on this form

Sample

```
var frm = solutionModel.getForm("myForm");
    var portals = frm.getPortals();
    for (var i in portals)
    {
        var p = portals[i];
        if (p.name != null)
            application.output(p.name);
        else
            application.output("unnamed portal detected");
    }
```

getTabPanel

[JSTabPanel](#) **getTabPanel(name)**

Returns a JSTabPanel that has the given name.

Parameters

{[String](#)} name – the specified name of the tabpanel

Returns

[JSTabPanel](#) – a JSTabPanel object

Sample

```
var frm = solutionModel.getForm("myForm");
    var tabPanel = frm.getTabPanel("myTabPanel");
    var tabs = tabPanel.getTabs();
    for (var i=0; i<tabs.length; i++)
        application.output("Tab " + i + " has text " + tabs[i].text);
```

getTabPanels

[JSTabPanel\[\]](#) **getTabPanels()**

Returns all JSTabPanels of this form (not including the ones from the parent form), including the ones without a name.

Returns

[JSTabPanel\[\]](#) – an array of all JSTabPanel objects on this form

Sample

```
var frm = solutionModel.getForm("myForm");
var tabPanels = frm.getTabPanels();
for (var i in tabPanels)
{
    var tp = tabPanels[i];
    if (tp.name != null)
        application.output("Tab " + tp.name + " has text " + tp.text);
    else
        application.output("Tab with text " + tp.text + " has no name");
}
```

[getTabPanels](#)

[JSTabPanel\[\]](#) **getTabPanels**(returnInheritedElements)

Returns all JSTabPanels of this form (optionally the ones from the parent form), including the ones without a name.

Parameters

{[Boolean](#)} returnInheritedElements – true to also return the elements from parent form

Returns

[JSTabPanel\[\]](#) – an array of all JSTabPanel objects on this form

Sample

```
var frm = solutionModel.getForm("myForm");
var tabPanels = frm.getTabPanels();
for (var i in tabPanels)
{
    var tp = tabPanels[i];
    if (tp.name != null)
        application.output("Tab " + tp.name + " has text " + tp.text);
    else
        application.output("Tab with text " + tp.text + " has no name");
}
```

[getTitleFooterPart](#)

[JSPart](#) **getTitleFooterPart**()

Retrieves the Title Footer part of the form.

Returns

[JSPart](#) – A JSPart instance corresponding to the Title Footer part of the form.

Sample

```
form.getTitleFooterPart().background = 'gray';
```

[getTitleHeaderPart](#)

[JSPart](#) **getTitleHeaderPart**()

Retrieves the Title Header part of the form.

Returns

[JSPart](#) – A JSPart instance corresponding to the Title Header part of the form.

Sample

```
form.getTitleHeaderPart().background = 'red';
```

[getTrailingGrandSummaryPart](#)

[JSPart](#) **getTrailingGrandSummaryPart**()

Retrieves the Trailing Grand Summary part of the form.

Returns

[JSPart](#) – A JSPart instance corresponding to the Trailing Grand Summary part of the form.

Sample

```
form.getTrailingGrandSummaryPart().background = 'yellow';
```

getTrailingSubSummaryParts

JSPart[] **getTrailingSubSummaryParts()**

Gets an array of the Trailing Subsummary parts of the form, ordered by their height from top == 0 to bottom.

Returns

JSPart[] – An array of JSPart instances corresponding to the Trailing Subsummary parts of the form.

Sample

```
form.getTrailingSubSummaryParts()[0].background = 'green';
```

getUUID

UUID **getUUID()**

Returns the UUID of this form.

Returns

UUID

Sample

```
var form_UUID = myForm.getUUID();
application.output(form_UUID.toString());
```

newBean

JBean **newBean**(name, className, x, y, width, height)

Creates a new JBean object on the form - including the name of the JBean object; the classname the JBean object is based on, the "x" and "y" position of the JBean object in pixels, as well as the width and height of the JBean object in pixels.

Parameters

{String} name – the specified name of the JBean object
{String} className – the class name of the JBean object
{Number} x – the horizontal "x" position of the JBean object in pixels
{Number} y – the vertical "y" position of the JBean object in pixels
{Number} width – the width of the JBean object in pixels
{Number} height – the height of the JBean object in pixels

Returns

JBean – a JBean object

Sample

```
var form = solutionModel.newForm('newForm1', 'server1', 'table1', null, true, 800, 600);
var bean = form.newBean('bean', 'com.servoy.extensions.beans.dbtreeview.DBTreeView', 200, 200, 300, 300);
forms['newForm1'].controller.show();
```

newButton

JButton **newButton**(text, x, y, width, height, jsmethod)

Creates a new button on the form with the given text, place, size and JSMMethod as the onAction event triggered action.

Parameters

text – the text on the button
{Number} x – the x coordinate of the button location on the form
{Number} y – the y coordinate of the button location on the form
{Number} width – the width of the button
{Number} height – the height of the button
jsmethod – the method assigned to handle an onAction event

Returns

JButton – a new JButton object

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
var method = form.newFormMethod('function onAction(event) { application.output("onAction intercepted on " + event.getFormName()); }');
var button = form.newButton('myButton', 10, 10, 100, 30, method);
application.output("The new button: " + button.name + " has the following onAction event handling method assigned " + button.onAction.getName());
```

newCalendar

JSField newCalendar(dataprovidername/jsvariable, x, y, width, height)

Creates a new JSField object on the form with the displayType of CALENDAR - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

Parameters

dataprovidername/jsvariable – the specified dataprovider name/JSVariable of the JSField object

{Number} x – the horizontal "x" position of the JSField object in pixels

{Number} y – the vertical "y" position of the JSField object in pixels

{Number} width – the width of the JSField object in pixels

{Number} height – the height of the JSField object in pixels

Returns

JSField – a new JSField object on the form with the displayType of CALENDAR

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
    var calendar = form.newCalendar(myDataProvider, 100, 100, 200, 200);
    forms['newForm1'].controller.show();
```

newCheck

JSField newCheck(dataprovidername/jsvariable, x, y, width, height)

Creates a new JSField object on the form with the displayType of CHECK (checkbox) - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

Parameters

dataprovidername/jsvariable – the specified dataprovider name/JSVariable of the JSField object

{Number} x – the horizontal "x" position of the JSField object in pixels

{Number} y – the vertical "y" position of the JSField object in pixels

{Number} width – the width of the JSField object in pixels

{Number} height – the height of the JSField object in pixels

Returns

JSField – a new JSField object on the form with the displayType of CHECK (checkbox)

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
    var calendar = form.newCheck(myDataProvider, 100, 100, 200, 200);
    forms['newForm1'].controller.show();
```

newComboBox

JSField newComboBox(dataprovidername/jsvariable, x, y, width, height)

Creates a new JSField object on the form with the displayType of COMBOBOX - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

Parameters

dataprovidername/jsvariable – the specified dataprovider name/JSVariable of the JSField object

{Number} x – the horizontal "x" position of the JSField object in pixels

{Number} y – the vertical "y" position of the JSField object in pixels

{Number} width – the width of the JSField object in pixels

{Number} height – the height of the JSField object in pixels

Returns

JSField – a new JSField object on the form with the displayType of COMBOBOX

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
    var calendar = form.newComboBox(myDataProvider, 100, 100, 200, 200);
    forms['newForm1'].controller.show();
```

newField

JSField newField(dataprovidername/jsvariable, displaytype, x, y, width, height)

Creates a new JSField object on the form - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

Parameters

dataprovidername/jsvariable – the specified dataprovider name/JSVariable of the JSField object

displaytype – the display type of the JSField object (see the Solution Model -> JSField node for display types)

{Number} x – the horizontal "x" position of the JSField object in pixels

{Number} y – the vertical "y" position of the JSField object in pixels

{Number} width – the width of the JSField object in pixels

{Number} height – the height of the JSField object in pixels

Returns

JSField – a new JSField object (of the specified display type)

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
var variable = form.newFormVariable('myVar', JSVariable.TEXT);
variable.defaultValue = "'This is a default value (with tripple quotes)!'";
var field = form.newField(variable, JSField.TEXT_FIELD, 100, 100, 200, 200);
forms['newForm1'].controller.show();
```

newFooterPart

JSPart newFooterPart()

Creates a new Footer part on the form.

Returns

JSPart – A JSPart instance corresponding to the newly created Footer form part.

Sample

```
var footer = form.newFooterPart(440);
```

newFormMethod

JSMETHOD newFormMethod(code)

Creates a new form JSMETHOD - based on the specified code.

Parameters

{String} code – the specified code for the new method

Returns

JSMETHOD – a new JSMETHOD object for this form

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
var method = form.newFormMethod('function aMethod(event){application.output("Hello world!");}');
var button = myListViewForm.newButton('Show message!', 50, 50, 100, 30, method);
forms['newForm1'].controller.show();
```

newFormVariable

JSVariable newFormVariable(name, type)

Creates a new form JSVariable - based on the name of the variable object and the number type, uses the SolutionModel JSVariable constants.

Parameters

{String} name – the specified name of the variable

{Number} type – the specified type of the variable (see Solution Model -> JSVariable node constants)

Returns

JSVariable – a JSVariable object

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
var variable = form.newFormVariable('myVar', JSVariable.TEXT);
variable.defaultValue = "'This is a default value (with tripple quotes)!'";
var field = form.newField(variable, JSField.TEXT_FIELD, 100, 100, 200, 200);
forms['newForm1'].controller.show();
```

newHeaderPart

JSPart newHeaderPart()

Creates a new Header part on the form.

Returns

JSPart – A JSPart instance corresponding to the newly created Header form part.

Sample

```
var header = form.newHeaderPart(80);
```

newHtmlArea

JSField newHtmlArea(dataprovidername/jsvariable, x, y, width, height)

Creates a new JSField object on the form with the displayType of HTML_AREA - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

Parameters

dataprovidername/jsvariable – the specified dataprovider name/JSVariable of the JSField object

{Number} x – the horizontal "x" position of the JSfield object in pixels

{Number} y – the vertical "y" position of the JSField object in pixels

{Number} width – the width of the JSField object in pixels

{Number} height – the height of the JSField object in pixels

Returns

JSField – a JSField object on the form with the displayType of HTML_AREA

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
var textProvider = form.newFormVariable('myVar', JSVariable.TEXT);
textProvider.defaultValue = " 'This is a tripple quoted text!' ";
var htmlArea = myListViewForm.newHtmlArea(textProvider, 100, 100, 100, 100);
forms['newForm1'].controller.show();
```

newImageMedia

JSField **newImageMedia**(dataprovidername/jsvariable, x, y, width, height)

Creates a new JSField object on the form with the displayType of IMAGE_MEDIA - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

Parameters

dataprovidername/jsvariable – the specified dataprovider name/JSVariable of the JSField object

{Number} x – the horizontal "x" position of the JSfield object in pixels

{Number} y – the vertical "y" position of the JSField object in pixels

{Number} width – the width of the JSField object in pixels

{Number} height – the height of the JSField object in pixels

Returns

JSField – a new JSField object on the form with the displayType of IMAGE_MEDIA

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
var myMediaVar = form.newFormVariable("media", JSVariable.MEDIA);
var imageMedia = form.newImageMedia(myMediaVar, 100, 100, 200, 200);
forms['newForm1'].controller.show();
```

newLabel

JSLabel **newLabel**(txt, x, y, width, height)

Creates a new JSLabel object on the form - including the text of the label, the "x" and "y" position of the label object in pixels, the width and height of the label object in pixels.

Parameters

{String} txt – the specified text of the label object

{Number} x – the horizontal "x" position of the label object in pixels

{Number} y – the vertical "y" position of the label object in pixels

{Number} width – the width of the label object in pixels

{Number} height – the height of the label object in pixels

Returns

JSLabel – a JSLabel object

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
var label = form.newLabel('The text on the label', 140, 140, 50, 20);
forms['newForm1'].controller.show();
```

newLabel

JSLabel **newLabel**(txt, x, y, width, height, action)

Creates a new JSLabel object on the form - including the text of the label, the "x" and "y" position of the label object in pixels, the width and height of the label object in pixels and a JSMethod action such as the method for an onAction event.

Parameters

{String} txt – the specified text of the label object

{Number} x – the horizontal "x" position of the label object in pixels

{Number} y – the vertical "y" position of the label object in pixels

{Number} width – the width of the label object in pixels

{Number} height – the height of the label object in pixels

{Object} action – the event action JSMethod of the label object

Returns

JSLabel – a JSLabel object

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
var label = form.newLabel('The text on the label', 140, 140, 50, 20);
forms['newForm1'].controller.show();
```

newLeadingGrandSummaryPart

JSPart newLeadingGrandSummaryPart()

Creates a new Leading Grand Summary part on the form.

Returns

JSPart – A JSPart instance corresponding to the newly created Leading Grand Summary form part.

Sample

```
var leadingGrandSummary = form.newLeadingGrandSummaryPart(120);
```

newLeadingSubSummaryPart

JSPart newLeadingSubSummaryPart()

Creates a new Leading Subsummary part on the form.

Returns

JSPart – A JSPart instance corresponding to the newly created Leading Subsummary form part.

Sample

```
var leadingSubsummary = form.newLeadingSubSummaryPart(160);
```

newPart

JSPart newPart(type, height)

Creates a new part on the form. The type of the new part (use one of the JSPart constants) and its height must be specified.

Parameters

{Number} type – The type of the new part.

{Number} height – The height of the new part

Returns

JSPart – A JSPart instance corresponding to the newly created form part.

Sample

```
var form = solutionModel.newForm('myForm', 'example_data', 'my_table', null, false, 1200, 800);
var header = form.newPart(JSPart.HEADER, 100);
header.background = 'yellow';
var body = form.newPart(JSPart.BODY, 700);
body.background = 'green';
var footer = form.newPart(JSPart.FOOTER, 800);
footer.background = 'orange';
```

newPassword

JSField newPassword(dataprovidername/jsvariable, x, y, width, height)

Creates a new JSField object on the form with the displayType of PASSWORD - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

Parameters

dataprovidername/jsvariable – the specified dataprovider name/JSVariable of the JSField object

{Number} x – the horizontal "x" position of the JSField object in pixels

{Number} y – the vertical "y" position of the JSField object in pixels

{Number} width – the width of the JSField object in pixels

{Number} height – the height of the JSField object in pixels

Returns

JSField – a new JSField object on the form with the displayType of PASSWORD

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
var pass = form.newPassword(globals.aVariable, 100, 100, 70, 30);
forms['newForm1'].controller.show();
```

newPortal

JSPortal **newPortal**(name, relation, x, y, width, height)

Creates a new JSPortal object on the form - including the name of the JSPortal object; the relation the JSPortal object is based on, the "x" and "y" position of the JSPortal object in pixels, as well as the width and height of the JSPortal object in pixels.

Parameters

{String} name – the specified name of the JSPortal object
{Object} relation – the relation of the JSPortal object
{Number} x – the horizontal "x" position of the JSPortal object in pixels
{Number} y – the vertical "y" position of the JSPortal object in pixels
{Number} width – the width of the JSPortal object in pixels
{Number} height – the height of the JSPortal object in pixels

Returns

JSPortal – a JSPortal object

Sample

```
var form = solutionModel.newForm('newForm1', 'server1', 'table1', null, true, 800, 600);
    var relation = solutionModel.newRelation('parentToChild', 'server1', 'table1', 'server2', 'table2',
JSRelation.INNER_JOIN);
    relation.newRelationItem('another_parent_table_id', '=', 'another_child_table_parent_id');
    var portal = form.newPortal('portal', relation, 200, 200, 300, 300);
    portal.newField('someColumn', JSField.TEXT_FIELD, 200, 200, 120);
    forms['newForm1'].controller.show();
```

newRadios

JSField **newRadios**(dataprovidername/jsvariable, x, y, width, height)

Creates a new JSField object on the form with the displayType of RADIOS (radio buttons) - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

Parameters

dataprovidername/jsvariable – the specified dataprovider name/JSVariable of the JSField object
{Number} x – the horizontal "x" position of the JSField object in pixels
{Number} y – the vertical "y" position of the JSField object in pixels
{Number} width – the width of the JSField object in pixels
{Number} height – the height of the JSField object in pixels

Returns

JSField – a JSField object with the displayType of RADIOS (radio buttons)

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
    var vlist = solutionModel.newValueList('options', JSValueList.CUSTOM_VALUES);
    vlist.customValues = "value1\nvalue2\nvalue3";
    var radios = form.newRadios('columnDataProvider', 100, 100, 200, 200);
    radios.valueList = vlist;
```

newRtfArea

JSField **newRtfArea**(dataprovidername/jsvariable, x, y, width, height)

Creates a new JSField object on the form with the displayType of RTF_AREA (enables more than one line of text to be displayed in a field) - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

Parameters

dataprovidername/jsvariable – the specified dataprovider name/JSVariable of the JSField object
{Number} x – the horizontal "x" position of the JSField object in pixels
{Number} y – the vertical "y" position of the JSField object in pixels
{Number} width – the width of the JSField object in pixels
{Number} height – the height of the JSField object in pixels

Returns

JSField – a JSField object with the displayType of RTF_AREA

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
    var rtf_area = form.newRtfArea('columnDataProvider', 100, 100, 100, 100);
    forms['newForm1'].controller.show();
```

newTabPanel

JSTabPanel **newTabPanel**(name, x, y, width, height)

Creates a new JSTabPanel object on the form - including the name of the JSTabPanel object, the "x" and "y" position of the JSTabPanel object in pixels, as well as the width and height of the JSTabPanel object in pixels.

Parameters

{String} name – the specified name of the JSTabPanel object
{Number} x – the horizontal "x" position of the JSTabPanel object in pixels
{Number} y – the vertical "y" position of the JSTabPanel object in pixels
{Number} width – the width of the JSTabPanel object in pixels
{Number} height – the height of the JSTabPanel object in pixels

Returns

JSTabPanel – a JSTabPanel object

Sample

```
var form = solutionModel.newForm('parentForm', 'theServer', 'parent_table', null, false, 640, 480);
    var childOne = solutionModel.newForm('childOne', 'theServer', 'child_table', null, false, 400, 300);
    childOne.newField('child_table_text', JSField.TEXT_FIELD, 10, 10, 100, 20);
    var parentToChild = solutionModel.newRelation
('parentToChild', 'theServer', 'parent_table', 'theServer', 'child_table', JSRelation.INNER_JOIN);
    parentToChild.newRelationItem('parent_table_id', '=', 'child_table_parent_id');
    var childTwo = solutionModel.newForm('childTwo', 'theServer', 'my_table', null, false, 400, 300);
    childTwo.newField('my_table_image', JSField.IMAGE_MEDIA, 10, 10, 100, 100);
var tabPanel = form.newTabPanel('tabs', 10, 10, 620, 460);
tabPanel.newTab('tab1', 'Child One', childOne, parentToChild);
tabPanel.newTab('tab2', 'Child Two', childTwo);
forms['parentForm'].controller.show();
```

newTextArea

JSField **newTextArea**(dataProvidername/jsvariable, x, y, width, height)

Creates a new JSField object on the form with the displayType of TEXT_AREA - including the dataProvider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

Parameters

dataProvidername/jsvariable – the specified dataProvider name/JSVariable of the JSField object
{Number} x – the horizontal "x" position of the JSTabPanel object in pixels
{Number} y – the vertical "y" position of the JSTabPanel object in pixels
{Number} width – the width of the JSTabPanel object in pixels
{Number} height – the height of the JSTabPanel object in pixels

Returns

JSField – a JSField object with the displayType of TEXT_AREA

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
    var globalVar = solutionModel.newGlobalVariable('myGlobal', JSVariable.TEXT);
    globalVar.defaultValue = "Type your text in here";
    var textArea = form.newTextArea(globalVar, 100, 100, 300, 150);
    forms['newForm1'].controller.show();
```

newTextField

JSField **newTextField**(dataProvidername/jsvariable, x, y, width, height)

Creates a new JSField object on the form with the displayType of TEXT_FIELD - including the dataProvider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

Parameters

dataProvidername/jsvariable – the specified dataProvider name/JSVariable of the JSField object
{Number} x – the horizontal "x" position of the JSField object in pixels
{Number} y – the vertical "y" position of the JSField object in pixels
{Number} width – the width of the JSField object in pixels
{Number} height – the height of the JSField object in pixels

Returns

JSField – a JSField object with the displayType of TEXT_FIELD

Sample

```
var form = solutionModel.newForm('newForm1','myServer','myTable',null,true,800,600);
    //choose the dataprovider or jsvariable you want for the Text Field
    var x = null;
    //global jsvariable as the dataprovider
//x = solutionModel.newGlobalVariable('myGlobal',JSVariable.TEXT);
    //x.defaultValue = "'Text from a global variable'";
    //or a form jsvariable as the dataprovider
    //x = form.newFormVariable('myFormVar',JSVariable.TEXT);
    //x.defaultValue = "'Text from a form variable'";
var textField = form.newTextField(x,100,100,200,50);
    //or a column data provider as the dataprovider
    //textField.dataProviderID = columnTextDataProvider;
forms['newForm1'].controller.show();
```

newTitleFooterPart

JSPart newTitleFooterPart()

Creates a new Title Footer part on the form.

Returns

[JSPart](#) – A JSPart instance corresponding to the newly created Title Footer form part.

Sample

```
var titleFooter = form.newTitleFooterPart(500);
```

newTitleHeaderPart

JSPart newTitleHeaderPart()

Creates a new Title Header part on the form.

Returns

[JSPart](#) – A JSPart instance corresponding to the newly created Title Header form part.

Sample

```
var titleHeader = form.newTitleHeaderPart(40);
```

newTrailingGrandSummaryPart

JSPart newTrailingGrandSummaryPart()

Creates a new Trailing Grand Summary part on the form.

Returns

[JSPart](#) – A JSPart instance corresponding to the newly created Trailing Grand Summary form part.

Sample

```
var trailingGrandSummary = form.newTrailingGrandSummaryPart(400);
```

newTrailingSubSummaryPart

JSPart newTrailingSubSummaryPart()

Creates a new Trailing Subsummary part on the form.

Returns

[JSPart](#) – A JSPart instance corresponding to the newly created Trailing Subsummary form part.

Sample

```
var trailingSubsummary = form.newTrailingSubSummaryPart(360);
```

newTypeAhead

JSField newTypeAhead(dataprovidername/jsvariable, x, y, width, height)

Creates a new JSField object on the form with the displayType of TYPE_AHEAD - including the dataprovider/JSVariable of the JSField object, the "x" and "y" position of the JSField object in pixels, as well as the width and height of the JSField object in pixels.

Parameters

dataprovidername/jsvariable – the specified dataprovider name/JSVariable of the JSField object

{[Number](#)} x – the horizontal "x" position of the JSField object in pixels

{[Number](#)} y – the vertical "y" position of the JSField object in pixels

{[Number](#)} width – the width of the JSField object in pixels

{[Number](#)} height – the height of the JSField object in pixels

Returns

[JSField](#) – a JSField object with the displayType of TYPE_AHEAD

Sample

```
var form = solutionModel.newForm('newForm1', 'myServer', 'myTable', null, true, 800, 600);
var vlist = solutionModel.newValueList('options', JSValueList.CUSTOM_VALUES);
vlist.customValues = "value1\nvalue2\nvalue3";
var typeAhead = form.newTypeAhead(columnTextDataProvider, 100, 100, 300, 200);
typeAhead.valueList = vlist;
forms['newForm1'].controller.show();
```

removeBean

Boolean [removeBean](#)(name)

Removes a JSBean that has the specified name. Returns true if removal was successful, false otherwise.

Parameters

[{String}](#) name – the specified name of the JSBean to be removed

Returns

Boolean – true if the JSBean has been removed; false otherwise

Sample

```
var form = solutionModel.getForm('myform');
form.removeBean('mybean');
```

removeButton

Boolean [removeButton](#)(name)

Removes a JSButton that has the specified name. Returns true if removal was successful, false otherwise.

Parameters

[{String}](#) name – the specified name of the JSButton to be removed

Returns

Boolean – true if the JSButton has been removed; false otherwise

Sample

```
var form = solutionModel.newForm('newFormX', 'myServer', 'myTable', null, true, 800, 600);
var b1 = form.newButton('This is button1', 100, 100, 200, 50, null);
b1.name = 'b1';
var jsmethod = form.newFormMethod("function removeMe(event) { var form = solutionModel.getForm('newFormX'); if
(form.removeButton('b1') == true) application.output('Button has been removed ok'); else application.output
('Button could not be deleted'); forms['newFormX'].controller.recreateUI();}");
var b2 = form.newButton('Click here to remove button1', 100, 230, 200, 50, jsmethod);
b2.name = 'b2';
forms['newFormX'].controller.show();
```

removeComponent

Boolean [removeComponent](#)(name)

Removes a component (JSLabel, JSButton, JSField, JSPortal, JSBean, JSTabpanel) that has the given name. It is the same as calling "if(!removeLabel(name) && !removeButton(name) ...)".

Returns true if removal was successful, false otherwise.

Parameters

[{String}](#) name – the specified name of the component to be deleted

Returns

Boolean – true if component has been successfully deleted; false otherwise

Sample

```
var form = solutionModel.newForm('newFormX','myServer','parentTable',null,true,1000,750);
var jsbutton = form.newButton('JSButton to delete',100,100,200,50,null);
jsbutton.name = 'jsb';
var jslabel = form.newLabel('JSLabel to delete',100,200,200,50,null);
jslabel.name = 'jsl';
jslabel.transparent = false;
jslabel.background = 'green';
var jsfield = form.newField('globals.myGlobalVariable',JSField.TEXT_FIELD,100,300,200,50);
jsfield.name = 'jsf';
var relation = solutionModel.newRelation('parentToChild','myServer','parentTable','myServer','childTable',
JSRelation.INNER_JOIN);
relation.newRelationItem('parent_table_id', '=', 'child_table_id');
var jsportal = form.newPortal('jsp',relation,100,400,300,300);
jsportal.newField('child_table_id',JSField.TEXT_FIELD,200,200,120);
var childOne = solutionModel.newForm('childOne','myServer','childTable',null,false,400,300);
childOne.newField('child_table_id', JSField.TEXT_FIELD,10,10,100,20);
var childTwo = solutionModel.newForm('childTwo','myServer','someOtherTable',null,false,400,300);
childTwo.newField('some_table_id', JSField.TEXT_FIELD,10,10,100,100);
var jstabpanel = form.newTabPanel('jst',450,30,620,460);
jstabpanel.newTab('tab1','Child One',childOne,relation);
jstabpanel.newTab('tab2','Child Two',childTwo);
var jsmethod = form.newFormMethod("function removeMe(event) { var form = solutionModel.getForm('newFormX');\n
if ((form.removeComponent('jsb') == true) && (form.removeComponent('jsl') == true) && (form.removeComponent
('jsf') == true) && (form.removeComponent('jsp') == true) & (form.removeComponent('jst') == true)) application.
output('Components removed ok'); else application.output('Some component(s) could not be deleted'); forms
['newFormX'].controller.recreateUI();}");
var removerButton = form.newButton('Click here to remove form components',450,500,250,50,jsmethod);
removerButton.name = 'remover';
forms['newFormX'].controller.show();
```

removeField

Boolean **removeField**(name)

Removes a JSField that has the given name. Returns true if removal was successful, false otherwise.

Parameters

{[String](#)} name – the specified name of the JSField to remove

Returns

Boolean – true is the JSField has been successfully removed; false otherwise

Sample

```
var form = solutionModel.newForm('newFormX','myServer','myTable',null,true,800,600);
var jsfield = form.newField(globals.myGlobalVariable,JSField.TEXT_FIELD,100,300,200,50);
jsfield.name = 'jsf';
var jsmethod = form.newFormMethod("function removeMe(event) { var form = solutionModel.getForm('newFormX');\n
if (form.removeComponent('jsf') == true) application.output('Field has been removed ok'); else application.
output('Field could not be deleted'); forms['newFormX'].controller.recreateUI();}");
var removerButton = form.newButton('Click here to remove the field',450,500,250,50,jsmethod);
removerButton.name = 'remover';
forms['newFormX'].controller.show();
```

removeLabel

Boolean **removeLabel**(name)

Removes a JSLabel that has the given name. Returns true if removal successful, false otherwise

Parameters

{[String](#)} name – the specified name of the JSLabel to be removed

Returns

Boolean – true if the JSLabel with the given name has successfully been removed; false otherwise

Sample

```
var form = solutionModel.newForm('newFormX','myServer','myTable',null,true,1000,750);
var jslabel = form.newLabel('JSLabel to delete',100,200,200,50,null);
jslabel.name = 'jssl';
jslabel.transparent = false;
jslabel.background = 'green';
var jsmethod = form.newFormMethod("function removeMe(event) { var form = solutionModel.getForm('newFormX'); if
(form.removeComponent('jssl') == true) application.output('Label has been removed'); else application.output
('Label could not be deleted'); forms['newFormX'].controller.recreateUI();}");
var removerButton = form.newButton('Click here to remove the green label',450,500,250,50,jsmethod);
removerButton.name = 'remover';
forms['newFormX'].controller.show();
```

removePart

Boolean **removePart**(type)

Removes a JSPart of the given type.

Parameters

{**Number**} type – The type of the part that should be removed.

Returns

Boolean – True if the part is successfully removed, false otherwise.

Sample

```
form.removePart(JSPart.HEADER);
form.removePart(JSPart.LEADING_SUBSUMMARY, 160);
```

removePart

Boolean **removePart**(type, height)

Removes a JSPart of the given type. The height parameter is for removing one of multiple subsummary parts.

Parameters

{**Number**} type – The type of the part that should be removed.

{**Number**} height – The height of the part that should be removed. This parameter is for removing one of multiple Leading/Trailing Subsummary parts.

Returns

Boolean – True if the part is successfully removed, false otherwise.

Sample

```
form.removePart(JSPart.HEADER);
form.removePart(JSPart.LEADING_SUBSUMMARY, 160);
```

removePortal

Boolean **removePortal**(name)

Removes a JSPortal that has the given name. Returns true if removal was successful, false otherwise.

Parameters

{**String**} name – the specified name of the JSPortal to be removed

Returns

Boolean – true if the JSPortal has successfully been removed; false otherwise

Sample

```
var form = solutionModel.newForm('newFormX','myServer','myTable',null,true,800,600);
    var relation = solutionModel.newRelation('parentToChild','myServer','myTable','myServer','myOtherTable',
JSRelation.INNER_JOIN);
    relation.newRelationItem('parent_table_id', '=', 'child_table_id');
    var jsportal = form.newPortal('jsp',relation,100,400,300,300);
    jsportal.newField('child_table_id',JSField.TEXT_FIELD,200,200,120);
    var jsmethod = form.newFormMethod("function removeMe(event) { var form = solutionModel.getForm
('newFormX');\n if (form.removeComponent('jsp') == true) application.output('Portal removed ok'); else
application.output('Portal could not be deleted'); forms['newFormX'].controller.recreateUI();}");
    var removerButton = form.newButton('Click here to remove the portal',450,500,250,50,jsmethod);
    removerButton.name = 'remover';
    forms['newFormX'].controller.show();
```

removeTabPanel

Boolean removeTabPanel(name)

Removes a JSTabPanel that has the given name. Returns true if removal was successful, false otherwise.

Parameters

{String} name – the specified name of the JSTabPanel to be removed

Returns

Boolean – true is the JSTabPanel has been successfully removed, false otherwise

Sample

```
var form = solutionModel.newForm('newFormX','myServer','parentTable',null,false,800,600);
var childOne = solutionModel.newForm('childOne','myServer','childTable',null,false,400,300);
childOne.newField('child_table_text', JSField.TEXT_FIELD,10,10,100,20);
var parentToChild = solutionModel.newRelation('parentToChild','myServer','parentTable','myServer','childTable',
JSRelation.INNER_JOIN);
parentToChild.newRelationItem('parent_table_id','=' ,'child_table_id');
var childTwo = solutionModel.newForm('childTwo','myServer','anotherTable',null,false,400,300);
childTwo.newField('columnDataProvider', JSField.TEXT_FIELD,10,10,100,100);
var tabPanel = form.newTabPanel('jst',10,10,620,460);
tabPanel.newTab('tab1','Child One',childOne,parentToChild);
tabPanel.newTab('tab2','Child Two',childTwo);
var jsmethod = form.newFormMethod("function removeMe(event) { var form = solutionModel.getForm('newFormX');\n
if (form.removeComponent('jst') == true)\n application.output('TabPanel has been removed ok');\n else\n
application.output('TabPanel could not be deleted');\n forms['newFormX'].controller.recreateUI();\n}");
var removerButton = form.newButton('Click here to remove the tab panel',450,500,250,50,jsmethod);
removerButton.name = 'remover';
forms['newFormX'].controller.show();
```
