

2020.03.1 LTS

If you still use the application server directly instead of WAR then the web.xml file from application_server/server/ROOT/WEB-INF/ must be adjusted to not get an exception on startup:

```
<filter>
  <filter-name>SeparateSessionFilter</filter-name>
  <filter-class>org.sablo.filter.SeparateSessionFilter</filter-class>
  <init-param>
    <!-- Separate sablo request from non-sablo (web client), only invalidate session when both are invalidated
-->
    <param-name>paths</param-name>
    <param-value>/rfb/:/websocket/:/solutions/:/spec/:/resources/</param-value>
  </init-param>
</filter>

<filter-mapping>
  <filter-name>SeparateSessionFilter</filter-name>
  <url-pattern>*</url-pattern>
</filter-mapping>
```

Remove those lines (are on different locations in the web.xml file).

Many cases are already also in [2020.06](#) except: SVY-15146, SVY-15153, SVY-15192, SVY-15208

Components	Key	Summary
Developer	SVY-15153	SPM and version with micro (or minor?) digits > 9
Developer	SVY-14986	NPE trying to export a WAR
Developer, SmartClient	SVY-14963	Set code of Methods with solutionModel does not work for scopes other than globals
Developer	SVY-14954	Developer 2020.03: non-existent database servers cause endless building only to be solved by force-quit
Developer	SVY-14950	NPE is thrown if the CustomType type does not exist
Developer	SVY-14877	When logging in with a wrong password, you do not get an appropriate error message
Developer, NG Desktop	SVY-14867	yarn inst-win error on ngdesktop service
Developer	SVY-14866	command line war export: follow up for SVY-14378
Developer, Server	SVY-14993	Audit login not working on Servoy Cloud
Developer	SVY-15192	org.json.XML.toJSONObject Has an other outcome then the older version of servoy.
Developer, NG Desktop	SVY-14868	Permission issues when exporting ngdesktop file
Extensions, NG Client	SVY-15060	typo in 'tag' typedef ngutils.spec
Extensions, NG Client	SVY-15035	Aggrid empty header-title throws error.
Extensions	SVY-14994	When broadcaster properties are messed up in the plugin admin page after server restart the broadcasterplugin is not visible and fixing is not possible in the admin page
Extensions, NG Client	SVY-14850	Use i18n labels for tooltips in datepicker components
Extensions	SVY-14926	NG Grid - edit format on number does not work if only display format is set

Extensions	SVY-14896	jasperreport plugin -> HtmlComponent.jar 's signer should be matched with latest jasperreport plugin package (2020.x version)
NGClient	SVY-14985	Oauth plugin wrong deeplink url
NGClient	SVY-14889	nullPointer when trying to use nested tagstring properties on webcomponents
Runtime	SVY-15055	different behavior in JSWebComponent.getJSONProperty() in developer compared to deployed
Runtime	SVY-15051	solutionModel.newForm(3 arguments) sometimes matches on the wrong one
Runtime	SVY-14915	nullPointer on joined subselects that have functions in the result
Runtime, Server	SVY-15074	Error in Query Builder with multiple Joins
Runtime, Server	SVY-15107	Caused by: com.servoy.j2db.dataprocessing.DataException: Unknown errorCode 100 Can't infer the SQL type to use for an instance of com.servoy.j2db.util.UUID. Use setObject() with an explicit Types value to specify the type to use.
Runtime	SVY-15146	Cannot save data on closing browser window
Server	SVY-15028	Server occasionally stuck at 100% CPU
Server	SVY-14976	Method cannot be reached by server, but is definitely there
Server	SVY-15015	Table filters with query builder join issues
Server	SVY-15208	audit log name cannot be anything other than 'log'
Server	SVY-14885	Deployed WAR will not run
Testing	SVY-14904	Auto-enter on not nullable fields when deploying
