

8.3.3 RC

This release has performance fixes in the developer with large workspaces (many forms). a speed increase is noticed the most when also using the shallow parsing see [8.3.1 RC](#). For 8.4 that property will be default to true.

Also a few performance improvements when deployed and a lot of concurrent request are done. Some global locking blocks are completely removed by concurrent replacements.

There are a lot of ng client extensions (component and services) that are fixed, those will be releases shortly after the RC. We need to wait for a AGGrid bug fix release to update our NG Grids (Power Grid, Data Grid)
