aboutServoy

Servoy is a professional, cross-platform rapid application development (RAD) and deployment environment heavily focused on database applications, that combines ease-of-use with enterprise scalability. With Servoy, you can connect to multiple databases from multiple locations; you can develop applications that are based on industry standards; and you can deploy your solution to the desktop as a rich client/server application (Servoy Smart Client), or via a web browser as a 100% HTML application (Servoy Web Client).

Servoy's intuitive and easy-to-use interface enables you to create rich, powerful desktop applications, database front-ends, data entry, and reporting systems - whether you are an ISV (Independent Software Vendor) migrating or developing an enterprise-level SaaS/PaaS (Software as a Service/Platform as a Service) application; an in-house developer from a company or organization; or even a non-developer such as a knowledge worker - in minutes without having to write any SQL code, in much less time than other development environments, and all with a single code base.

By using Servoy, workgroups no longer need disconnected desktop databases for data entry; Crystal Reports for reporting; or installation of JDBC or ODBC drivers on each client. Servoy combines all this functionality into one powerful unified environment - thus saving development time, virtually eliminating end-user deployment hassles, and lowering both maintenance and support costs.

The Servoy Suite of products consists of:

- Servoy Developer
- Servoy Smart Client
- Servoy Web Client
- Servoy Headless Client
- Servoy Server
- Servoy Runtime

Servoy Developer
Servoy Developer - an Eclipse plug-in - consists of a powerful graphic user interface (GUI) designer - fully event driven and scriptable using JavaScript - that enables to you create complete solutions.

Servoy Smart Client
Servoy Smart Client is a rich Java zero deployment component of the Servoy suite of products that runs finished solutions built with Servoy Developer.

Servoy Web Client
Servoy Web Client is a 100% HTML client that enables you to run finished solutions built with Servoy Developer using a web browser.

Servoy Headless Client
Servoy Headless Client enables you integrate data and business logic (Servoy scripts) in JSP pages, Servlets and Java applications.

Servoy Server
Servoy Server handles database server connections, Servoy Client concurrency and client server communication.

Servoy Runtime
Servoy Runtime is a stand alone version of Servoy. It has a built-in PostgreSQLdatabase engine and can be run locally or from a cd.
