

ELEMENT_TYPES

Constants Summery

- String** [#BUTTON](#)
Constant representing an element of the Button type.
- String** [#CALENDAR](#)
Constant representing an element of the Calendar type.
- String** [#CHECK](#)
Constant representing an element of the Check type.
- String** [#GROUP](#)
Constant representing a Group of elements.
- String** [#IMAGE_MEDIA](#)
Constant representing an element of the ImageMedia type.
- String** [#LABEL](#)
Constant representing an element of the Label type.
- String** [#PASSWORD](#)
Constant representing an element of the Password type.
- String** [#PORTAL](#)
Constant representing an element of the Portal type.
- String** [#RADIOS](#)
Constant representing an element of the Radios type.
- String** [#TABPANEL](#)
Constant representing an element of the Tabpanel type.
- String** [#TEXT_AREA](#)
Constant representing an element of the TextArea type.
- String** [#TEXT_FIELD](#)
Constant representing an element of the TextField type.

Constants Details

BUTTON

Constant representing an element of the Button type.

Returns

String

Sample

```
//the return value for an element of the Button type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.BUTTON)
{
    // element is a Button component
}
```

CALENDAR

Constant representing an element of the Calendar type.

Returns

String

Sample

```
//the return value for an element of the Calendar type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.CALENDAR)
{
    // element is a Calendar field
}
```

CHECK

Constant representing an element of the Check type.

Returns

String

Sample

```
//the return value for an element of the Check type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.CHECK)
{
    // element is a Check(box) field
}
```

GROUP

Constant representing a Group of elements.

Returns

[String](#)

Sample

```
//the return value for an element of the TextField type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.GROUP)
{
    // element is a group element
}
```

IMAGE_MEDIA

Constant representing an element of the ImageMedia type.

Returns

[String](#)

Sample

```
//the return value for an element of the ImageMedia type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.IMAGE_MEDIA)
{
    // element is a Image Media field
}
```

LABEL

Constant representing an element of the Label type.

Returns

[String](#)

Sample

```
//the return value for an element of the Label type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.LABEL)
{
    // element is a Label component
}
```

PASSWORD

Constant representing an element of the Password type.

Returns

[String](#)

Sample

```
//the return value for an element of the Password type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.PASSWORD)
{
    // element is a Password component
}
```

PORTAL

Constant representing an element of the Portal type.

Returns

[String](#)

Sample

```
//the return value for an element of the Portal type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.PORTAL)
{
    // element is a Portal component
}
```

RADIOS

Constant representing an element of the Radios type.

Returns

[String](#)

Sample

```
//the return value for an element of the Radios type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.RADIOS)
{
    // element is a Radios field.
}
```

TABPANEL

Constant representing an element of the Tabpanel type.

Returns

[String](#)

Sample

```
//the return value for an element of the Tabpanel type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.TABPANEL)
{
    // element is a Tabpanel component
}
```

TEXT_AREA

Constant representing an element of the TextArea type.

Returns

[String](#)

Sample

```
//the return value for an element of the TextArea type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.TEXT_AREA)
{
    // element is a TextArea field
}
```

TEXT_FIELD

Constant representing an element of the TextField type.

Returns

[String](#)

Sample

```
//the return value for an element of the TextField type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.TEXT_FIELD)
{
    // element is a text field
}
```
