Connecting to a SVN Repository

To use an SVN Team Provider, you must have a repository already setup for use (on an SVN server). Please see (add link here) for more details about setting up an SVN Server and a repository.

Connecting to an Existing Repository

1. From the menu bar select Window > Open Perspective > Other

Window	Help			
New Window				
New Editor				
Open Perspective		۰	Other	
Show View		÷	145	
Customize Perspective				
Save Perspective As				
Reset Perspective				
Close Perspective				
Close	All Perspectives			
Naviga	ation	۲		
Prefer	ences			

2. From the Open Perspective Dialog, select SVN Repository Exploring

Ø Open Perspective	
CVS Repository Exploring Debug Java Java Java Browsing Java Type Hierarchy Javascript Resource Servoy Design (default) SQL Explorer SVN Repository Exploring Team Synchronizing	
ок (Cancel

3. Select the button to Add a new SVN Repository Location.

Ο SVN Repository Exploring - Servoy Developer
File Edit Navigate Search Project Elements Actions Run Window Help
📬 • 🖫 🗁 🖬 • A 📾 📾 🖉 🖉 ⊥⊥ ⊥ 🗐 I − O
👩 SVN Repositories 🛛 🖉 SVN Annotate
Add SVN Repository

This only creates a link to the repository, it does not create the repository itself.

4. Enter the URL for your repository and click finish

Add SVN Repository	
Add a new SVN Repository Add a new SVN Repository to the SVN Repositories view	v SVN
Location <u>U</u> rl: http://my-host.com/svn/my-repository	
?	Einish Cancel

5. Once you have connected, you may brows the repository structure
