Admin Settings

The Admin Settings offer options to set several groups of properties, as well as the email address of the Servoy Application Server administrator.

servoy.application_server.startRepositoryAsTeamProvider

Needed in case of running this server as repository-based development server for eclipse developers

servoy.admin_email_address

The email address to use for notification about license usage; make sure the mail (server plugin) properties are set as well to enable mail to be sent.

system.properties

System properties for the application server (these will also be passed to the clients as properties).

user.properties

User properties to be passed to the clients.

log4j.properties

Logging properties to be passed to the log4j system.
