
2019.03_RC2

This release contains a few more fixes above the [RC1](#) that were found as a regression for 2019_03 or 84 (compared to 833).

The improvement this release has is that the WarExporter (through the developer or command line) now has an auto upgrade support for licences.

In the developer it will auto upgrade and replace the license that is currently set in the wizard, when using the command line it will also do the same, and also report this so that the command line call can be changed.

See [what's new](#) for all the new stuff in the 2019.03 release

Components	Key	Summary
Developer	SVY-13491	less compile error (maybe with nested directories?)
Developer	SVY-13476	WarExporter saveLicense should auto upgrade the license (if it is not valid)
Developer	SVY-13503	Auto conversion of CSS positioned forms in inheritance chain should skip abstract forms
Developer	SVY-13501	Aggregations tab doesn't show the active solution
Extensions	SVY-13505	[oauth plugin] support for LinkedIn
NGClient	SVY-13456	Foundset's viewport is not properly updated
NGClient	SVY-13477	Error onCellClick in Grouping Table with a dataprovider with sequence type 'db identity'
NGClient	SVY-13446	api and handler problems in 8.4
NGClient	SVY-13502	Error when replacing a foundset on a servoyextra-table when a date is involved
