Using External CSS

It is possible to use external CSS files by importing them as solution's media files.

By default Servoy 7 mobile uses the default theme from JQueryMobile version 1.3.2; you can overwrite that, with a custom theme (created with ThemeRoller https://themeroller.jquerymobile.com/ for version 1.3.x) by importing the CSS in the solution's media with the name **jquery.mobile.theme.css**

As Servoy 8 uses JQueryMobile version 1.4.2, you need to use the corresponding version in the ThemeRoller, and import the CSS in the solution's media with the name **jquery.mobile.theme.css** and the icons CSS with the name **jquery.mobile.icons.css**

*Be aware that changes will be seen only in the client, not in the form editor.
