## Supported Clients

SmartClient WebClient NGClient MobileClient

## Methods Summary

void	<a href="#">assertEquals(expected, actual)</a>	Asserts that two values are equal.
void	<a href="#">assertEquals(message, expected, actual)</a>	Asserts that two values are equal.
void	<a href="#">assertFalse(boolean_condition)</a>	Asserts that a condition is false.
void	<a href="#">assertFalse(message, boolean_condition)</a>	Asserts that a condition is false.
void	<a href="#">assertFloatEquals(expectedFloat, actualFloat, tolerance)</a>	Asserts that two floating point values are equal to within a given tolerance.
void	<a href="#">assertFloatEquals(message, expectedFloat, actualFloat, tolerance)</a>	Asserts that two floating point values are equal to within a given tolerance.
void	<a href="#">assertMatches(regularExpression, actualString)</a>	Asserts that a regular expression matches a string.
void	<a href="#">assertMatches(message, regularExpression, actualString)</a>	Asserts that a regular expression matches a string.
void	<a href="#">assertNotNull(object)</a>	Asserts that an object is not null.
void	<a href="#">assertNotNull(message, object)</a>	Asserts that an object is not null.
void	<a href="#">assertNotSame(notExpected, actual)</a>	Asserts that two values are not the same.
void	<a href="#">assertNotSame(message, notExpected, actual)</a>	Asserts that two values are not the same.
void	<a href="#">assertNotUndefined(undefinedObject)</a>	Asserts that an object is not undefined.
void	<a href="#">assertNotUndefined(message, definedObject)</a>	Asserts that an object is not undefined.
void	<a href="#">assertNull(nullValue)</a>	Asserts that an object is null.
void	<a href="#">assertNull(message, nullValue)</a>	Asserts that an object is null.
void	<a href="#">assertSame(expected, actual)</a>	Asserts that two values are the same.
void	<a href="#">assertSame(message, expected, actual)</a>	Asserts that two values are the same.
void	<a href="#">assertTrue(boolean_condition)</a>	Asserts that a condition is true.
void	<a href="#">assertTrue(message, boolean_condition)</a>	Asserts that a condition is true.
void	<a href="#">assertUndefined(undefinedValue)</a>	Asserts that an object is undefined.
void	<a href="#">assertUndefined(message, undefinedValue)</a>	Asserts that an object is undefined.
void	<a href="#">fail(message)</a>	Fails a test.
void	<a href="#">fail(message, instanceOfCallStack)</a>	Fails a test.
void	<a href="#">fail(message, instanceOfCallStack, userMessage)</a>	Fails a test.

## Methods Details

### **assertEquals(expected, actual)**

Asserts that two values are equal. AssertionFailedError is thrown if the actual value does not match the regular expression.

#### Parameters

**Object** expected the expected value.  
**Object** actual the actual value.

#### Supported Clients

SmartClient,WebClient,NGClient,MobileClient

#### Sample

```
// Asserts that two values are equal. AssertionFailedError is thrown if the actual value does not match the
regular expression.
jsunit.assertEquals("Solution name test", "someSolution", application.getSolutionName());
jsunit.assertEquals("Simple math test", 2, 1 + 1);
```

### **assertEquals(message, expected, actual)**

Asserts that two values are equal. AssertionFailedError is thrown if the actual value does not match the regular expression.

**Parameters**

`String` message The test description/message.  
`Object` expected the expected value.  
`Object` actual the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that two values are equal. AssertionFailedError is thrown if the actual value does not match the
regular expression.
jsunit.assertEquals("Solution name test", "someSolution", application.getSolutionName());
jsunit.assertEquals("Simple math test", 2, 1 + 1);
```

**assertFalse(boolean\_condition)**

Asserts that a condition is false. AssertionFailedError is thrown if the evaluation was not false.

**Parameters**

`Boolean` boolean\_condition the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that a condition is false. AssertionFailedError is thrown if the evaluation was not false.
jsunit.assertFalse("False test", application.isLastPrintPreviewPrinted());
```

**assertFalse(message, boolean\_condition)**

Asserts that a condition is false. AssertionFailedError is thrown if the evaluation was not false.

**Parameters**

`String` message The test description/message.  
`Boolean` boolean\_condition the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that a condition is false. AssertionFailedError is thrown if the evaluation was not false.
jsunit.assertFalse("False test", application.isLastPrintPreviewPrinted());
```

**assertFloatEquals(expectedFloat, actualFloat, tolerance)**

Asserts that two floating point values are equal to within a given tolerance. AssertionFailedError is thrown if the expected value is not within the tolerance of the actual one.

**Parameters**

`Number` expectedFloat the expected value.  
`Number` actualFloat the actual value.  
`Number` tolerance tolerance when comparing.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that two floating point values are equal to within a given tolerance. AssertionFailedError is thrown
if the expected value is not within the tolerance of the actual one.
jsunit.assertFloatEquals("Float equals test", 3.12, 3.121, 0.0015);
```

**assertFloatEquals(message, expectedFloat, actualFloat, tolerance)**

Asserts that two floating point values are equal to within a given tolerance. AssertionFailedError is thrown if the expected value is not within the tolerance of the actual one.

**Parameters**

`String message` The test description/message.  
`Number expectedFloat` the expected value.  
`Number actualFloat` the actual value.  
`Number tolerance` tolerance when comparing.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that two floating point values are equal to within a given tolerance. AssertionFailedError is thrown
// if the expected value is not within the tolerance of the actual one.
jsunit.assertFloatEquals("Float equals test", 3.12, 3.121, 0.0015);
```

**assertMatches(regularExpression, actualString)**

Asserts that a regular expression matches a string. AssertionFailedError is thrown if the expected value is not the actual one.

**Parameters**

`Object regularExpression` the regular expression used for matching.  
`String actualString` the actual value to be matched.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that a regular expression matches a string. AssertionFailedError is thrown if the expected value is
not the actual one.
jsunit.assertMatches(new RegExp("gr(a|e)y"), "gray");
```

**assertMatches(message, regularExpression, actualString)**

Asserts that a regular expression matches a string. AssertionFailedError is thrown if the expected value is not the actual one.

**Parameters**

`String message` The test description/message.  
`Object regularExpression` the regular expression used for matching.  
`String actualString` the actual value to be matched.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that a regular expression matches a string. AssertionFailedError is thrown if the expected value is
not the actual one.
jsunit.assertMatches("Match test", new RegExp("gr(a|e)y"), "gray");
```

**assertNotNull(object)**

Asserts that an object is not null. AssertionFailedError is thrown if the object is not null.

**Parameters**

`Object object` the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that an object is not null. AssertionFailedError is thrown if the object is not null.
var a; // this is undefined, not null
jsunit.assertNotNull(a);
```

**assertNotNull(message, object)**

Asserts that an object is not null. AssertionFailedError is thrown if the object is not null.

**Parameters**

`String` message The test description/message.  
`Object` object the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that an object is not null. AssertionFailedError is thrown if the object is not null.
var a; // this is undefined, not null
jsunit.assertNotNull("Not null test", a);
```

**assertNotSame(notExpected, actual)**

Asserts that two values are not the same. AssertionFailedError is thrown if the expected value is the actual one.

**Parameters**

`Object` notExpected the value that is not expected.  
`Object` actual the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that two values are not the same. AssertionFailedError is thrown if the expected value is the actual one.
var a = new Date(1990, 1, 1);
var b = new Date(1990, 1, 1);
jsunit.assertNotSame(a, b);
jsunit.assertEquals("But equals", a, b);
```

**assertNotSame(message, notExpected, actual)**

Asserts that two values are not the same. AssertionFailedError is thrown if the expected value is the actual one.

**Parameters**

`String` message The test description/message.  
`Object` notExpected the value that is not expected.  
`Object` actual the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that two values are not the same. AssertionFailedError is thrown if the expected value is the actual one.
var a = new Date(1990, 1, 1);
var b = new Date(1990, 1, 1);
jsunit.assertNotSame("Not same test", a, b);
jsunit.assertEquals("But equals", a, b);
```

**assertNotUndefined(undefinedObject)**

Asserts that an object is not undefined. AssertionFailedError is thrown if the object is undefined.

**Parameters**

`Object` definedObject the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that an object is not undefined. AssertionFailedError is thrown if the object is undefined.
var a = 0;
jsunit.assertNotUndefined(a);
```

**assertNotUndefined(message, definedObject)**

Asserts that an object is not undefined. AssertionFailedError is thrown if the object is undefined.

**Parameters**

`String` message The test description/message.  
`Object` definedObject the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that an object is not undefined. AssertionFailedError is thrown if the object is undefined.
var a = 0;
jsunit.assertNotUndefined("Not undefined test", a);
```

**assertNull(nullValue)**

Asserts that an object is null. AssertionFailedError is thrown if the object is not null.

**Parameters**

`Object` nullValue the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that an object is null. AssertionFailedError is thrown if the object is not null.
jsunit.assertNull("Null test", null);
```

**assertNull(message, nullValue)**

Asserts that an object is null. AssertionFailedError is thrown if the object is not null.

**Parameters**

`String` message The test description/message.  
`Object` nullValue the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that an object is null. AssertionFailedError is thrown if the object is not null.
jsunit.assertNull("Null test", null);
```

**assertSame(expected, actual)**

Asserts that two values are the same. AssertionFailedError is thrown if the expected value is not the actual one.

**Parameters**

`Object` expected the expected value.  
`Object` actual the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that two values are the same. AssertionFailedError is thrown if the expected value is not the actual
one.
var a = new Date(1990, 1, 1);
var b = a;
jsunit.assertSame(a, b);
```

**assertSame(message, expected, actual)**

Asserts that two values are the same. AssertionFailedError is thrown if the expected value is not the actual one.

**Parameters**

`String` message The test description/message.  
`Object` expected the expected value.  
`Object` actual the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that two values are the same. AssertionFailedError is thrown if the expected value is not the actual one.
var a = new Date(1990, 1, 1);
var b = a;
jsunit.assertEquals("Same test", a, b);
```

**assertTrue(boolean\_condition)**

Asserts that a condition is true. AssertionFailedError is thrown if the evaluation was not true.

**Parameters**

`Boolean` boolean\_condition the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that a condition is true. AssertionFailedError is thrown if the evaluation was not true.
jsunit.assertTrue("True test", application.isLastPrintPreviewPrinted());
```

**assertTrue(message, boolean\_condition)**

Asserts that a condition is true. AssertionFailedError is thrown if the evaluation was not true.

**Parameters**

`String` message The test description/message.  
`Boolean` boolean\_condition the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that a condition is true. AssertionFailedError is thrown if the evaluation was not true.
jsunit.assertTrue("True test", application.isLastPrintPreviewPrinted());
```

**assertUndefined(undefinedValue)**

Asserts that an object is undefined. AssertionFailedError is thrown if the object is defined.

**Parameters**

`Object` undefinedValue the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that an object is undefined. AssertionFailedError is thrown if the object is defined.
jsunit.assertUndefined("Undefined test", thisIsUndefined);
```

**assertUndefined(message, undefinedValue)**

Asserts that an object is undefined. AssertionFailedError is thrown if the object is defined.

**Parameters**

`String` message The test description/message.  
`Object` undefinedValue the actual value.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Asserts that an object is undefined. AssertionFailedError is thrown if the object is defined.
jsunit.assertUndefined(thisIsUndefined);
```

**fail(message)**

Fails a test. AssertionFailedError is always thrown.

**Parameters**

**String** message The test description/message. This is usually the only parameter specified when calling this method.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Fails a test. AssertionFailedError is always thrown.
jsunit.fail("Fail test");
jsunit.fail("test", null, "Fail"); // 2nd param is not used in Servoy, params 3 and 1 get merged to form a
message. The result is the same as in the line above.
```

**fail(message, instanceOfCallStack)**

Fails a test. AssertionFailedError is always thrown.

**Parameters**

**String** message The test description/message. This is usually the only parameter specified when calling this method.

**Object** instanceOfCallStack an internal JSUnit call stack. Use null for this if you want to get to the next optional parameter. Usually not specified.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Fails a test. AssertionFailedError is always thrown.
jsunit.fail("Fail test");
jsunit.fail("test", null, "Fail"); // 2nd param is not used in Servoy, params 3 and 1 get merged to form a
message. The result is the same as in the line above.
```

**fail(message, instanceOfCallStack, userMessage)**

Fails a test. AssertionFailedError is always thrown.

**Parameters**

**String** message The test description/message. This is usually the only parameter specified when calling this method.

**Object** instanceOfCallStack an internal JSUnit call stack. Use null for this if you want to get to the next optional parameter. Usually not specified.

**String** userMessage a user message. Usually not specified.

**Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

**Sample**

```
// Fails a test. AssertionFailedError is always thrown.
jsunit.fail("Fail test");
jsunit.fail("test", null, "Fail"); // 2nd param is not used in Servoy, params 3 and 1 get merged to form a
message. The result is the same as in the line above.
```
