

# servoyDeveloper

 Apr 03, 2024 10:56

Supported Clients

SmartClient WebClient NGClient MobileClient

Methods Summary		
void	<code>openForm(form)</code>	Opens the form <code>FormEditor</code> in the developer.
void	<code>save()</code>	Saves all changes made through the solution model into the workspace.
void	<code>save(override)</code>	Saves all changes made through the solution model into the workspace.
void	<code>save(obj)</code>	Saves just the given form, valuelist, relation or in memory datasource into the developers workspace.
void	<code>save(obj, override)</code>	Saves just the given form, valuelist, relation or in memory datasource into the developers workspace.
void	<code>save(obj, solutionName)</code>	Saves just the given form, valuelist, relation or in memory datasource into the developers workspace.
void	<code>updateInMemDataSource(dataSource, dataset, types)</code>	Updates the given in memory datasource and saves it into the developers workspace.

## Methods Details

**openForm(form)**  
Opens the form `FormEditor` in the developer.

Parameters

`Object` form The form name or JSForm object to open in an editor.

Supported Clients

SmartClient,WebClient,NGClient,MobileClient

Sample

**save()**  
Saves all changes made through the solution model into the workspace.  
Please note that this method only saves the new in memory datasources,  
if you would like to override the existing ones use `servoyDeveloper.save(true)`.

Supported Clients

SmartClient,WebClient,NGClient,MobileClient

Sample

**save(override)**  
Saves all changes made through the solution model into the workspace.

Parameters

`Boolean` override Override existing in memory tables.

Supported Clients

SmartClient,WebClient,NGClient,MobileClient

Sample

**save(obj)**  
Saves just the given form, valuelist, relation or in memory datasource into the developers workspace.  
This must be a solution created or altered form/in memory datasource.

Parameters

`Object` obj The formname, JSForm, JSValueList, JSRelation, datasource name or JSDataSource object to save.

Supported Clients

SmartClient,WebClient,NGClient,MobileClient

---

**Sample**  
**save(obj, override)**

Saves just the given form, valuelist, relation or in memory datasource into the developers workspace. This must be a solution created or altered form/in memory datasource.

**Parameters**

**Object** obj      The formname, JSForm, JSValueList, JSRelation, datasource name or JSDataSource object to save.  
**Boolean** override      Override an existing in memory table.

**Supported Clients**

SmartClient,WebClient,NGClient,MobileClient

**Sample**  
**save(obj, solutionName)**

Saves just the given form, valuelist, relation or in memory datasource into the developers workspace. This must be a solution created form/in memory datasource.

NOTE: The current method can only be used for new objects.

For existing objects, please use the save method with the override flag set to true.

It is not needed to specify the solution, because the object to be updated will be saved in the right solution.

**Parameters**

**Object** obj      The formname, JSForm, JSValueList, JSRelation, datasource name or JSDataSource object to save.  
**String** solutionName      The destination solution, a module of the active solution.

**Supported Clients**

SmartClient,WebClient,NGClient,MobileClient

**Sample**  
**updateInMemDataSource(dataSource, dataset, types)**

Updates the given in memory datasource and saves it into the developers workspace.

**Parameters**

**Object** dataSource      datasource name or JSDataSource object to save.  
**Object** dataset      the dataset with the update columns  
**Object** types      array of the update columns types

**Supported Clients**

SmartClient,WebClient,NGClient,MobileClient
