# Solution

String

String

Apr 03, 2024 06:59

## **Supported Clients**

SmartClient WebClient NGClient MobileClient

## **Property Summary**

String comment

Number firstForm The first form that loads when a solution is deployed.

String i18nDataSource The i18n database server connection and database table that stores the i18n keys for a

solution

Number loginForm The name of the login form that loads when a solution is deployed.

loginSolutionName Get the first module that is also a login solution.

modulesNames The list of modules that have been added to a solution.

Boolean mustAuthenticate Flag that tells if authentication is needed in order to access the solution.

Number solutionType The type of a solution; can be "Normal" (non-module), "Module", "Web client only", "Smart

client only", "Login", "Authenticator", "Pre-import hook module", "Post-import hook

module", "Mobile".

Number styleSheet The custom CSS used by the solution (a MEDIA lib entry).

Number textOrientation The direction that text is displayed.

String titleText The menu bar title of a solution.

String version This is the version of the solution, this can be any kind of string but try to follow "Semantic

Versioning".

## **Event Summary**

void onAutoSaveFailed(recordMarkers) The method that is executed when autosave results in validation or save failures.

void onBeforeLogin(|) The method that is to onOpen just that it executes before the login on solutions with a

login form (not login soliution).

Boolean onClose(force) The method that is executed when a solution closes. void onDataBroadcast(dataSource, action, pks, Method that is executed when data broadcast occurs

void onDataBroadcast(dataSource, action, pks, Method that is executed when data broadcast occurs. cached)

Boolean on Error(ex) The method that is executed when a solution opens and an error occurs.

void onOpen(arg, |) The method that is executed when a solution opens.

## **Property Details**

### comment

### Returns

String

## Supported Clients

SmartClient, WebClient, NGClient

Sample

## firstForm

The first form that loads when a solution is deployed.

NOTE: If the Login form is specified, then the firstForm is the first form that will load next after the loginForm.

## Returns

Number

## **Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

Sample

## i18nDataSource

The i18n database server connection and database table that stores the i18n keys for a solution.

### Returns

String

#### Supported Clients

SmartClient, WebClient, NGClient

Sample

### **loginForm**

The name of the login form that loads when a solution is deployed.

#### Returns

Number

## Supported Clients

SmartClient, WebClient, NGClient, MobileClient

Sample

## **loginSolutionName**

Get the first module that is also a login solution.

### Returns

String

### **Supported Clients**

SmartClient, WebClient, NGClient

Sample

#### modulesNames

The list of modules that have been added to a solution.

## Returns

String

## Supported Clients

SmartClient, WebClient, NGClient, MobileClient

Sample

## mustAuthenticate

Flag that tells if authentication is needed in order to access the solution.

If unchecked, the Smart Client will always require authentication, regardless of this setting. If checked, authentication is required, and either a provided loginSolution or otherwise the default Servoy login mechanism will be used.

If default Servoy login mechanism is used, the "servoy.webclient.basic.authentication" setting on the Admin Page can be used to enable the use of the standard browser basic authentication.

### Returns

Boolean

## Supported Clients

SmartClient, WebClient, NGClient, MobileClient

Sample

## solutionType

The type of a solution; can be "Normal" (non-module), "Module", "Web client only", "Smart client only", "Login", "Authenticator", "Pre-import hook module", "Post-import hook module", "Mobile". These constants are defined in SolutionMetaData class.

### Returns

Number

## Supported Clients

SmartClient, WebClient, NGClient, MobileClient

#### Sample

### styleSheet

The custom CSS used by the solution (a MEDIA lib entry). It can reference other media resources (even additional .css through relative '@import' statements).

For NGClient - this CSS will be available directly in the browser.

#### Returns

Number

### **Supported Clients**

**NGClient** 

#### Sample

#### textOrientation

The direction that text is displayed.

Options include: DEFAULT left to right right to left locale specific

#### Returns

Number

#### Supported Clients

SmartClient, WebClient, NGClient

#### Sample

#### titleText

The menu bar title of a solution.

## Returns

String

## Supported Clients

SmartClient,WebClient,NGClient

### Sample

## version

This is the version of the solution, this can be any kind of string but try to follow "Semantic Versioning". This version is important when you are making modules that are distributed by the Servoy Package Manager. Then this version is used to know what the developer has installed. This version should be in sync then with the webpackage.json file.

## Returns

String

### Supported Clients

SmartClient, WebClient, NGClient, MobileClient

### Sample

## **Event Details**

## onAutoSaveFailed(recordMarkers)

The method that is executed when autosave results in validation or save failures. This is not called for save or validate calls that are triggered from javascript itself (databaseManager.saveData()), only when Servoy tries an auto save because of some event like user clicking on the form itself or foundset selection change.

### **Parameters**

Object recordMarkers an array of all the record markers that failed to validate or save.

#### Supported Clients

SmartClient, WebClient, NGClient

#### Sample

## onBeforeLogin(|)

The method that is to onOpen just that it executes before the login on solutions with a login form (not login soliution). The default is -none-.

### **Parameters**

Object| String> queryParams all query parameters of the deeplink url with which the Client was started, key>string if there was one value else key>Array<String>

## **Supported Clients**

SmartClient, WebClient, NGClient, MobileClient

#### Sample

## onClose(force)

The method that is executed when a solution closes. The default is -none-.

#### **Parameters**

Boolean force if false then solution close can be stopped by returning false

#### Returns

Boolean

### **Supported Clients**

SmartClient, WebClient, NGClient

### Sample

## onDataBroadcast(dataSource, action, pks, cached)

Method that is executed when data broadcast occurs. The default is -none-.

### **Parameters**

String dataSource table data source

Number action see SQL\_ACTION\_TYPES constants

JSDataSet pks affected primary keys
Boolean cached data was cached

## Supported Clients

SmartClient, WebClient, NGClient

### Sample

## onError(ex)

The method that is executed when a solution opens and an error occurs. The default is -none.

## **Parameters**

Object ex exception to handle

## Returns

Boolean

## Supported Clients

SmartClient, WebClient, NGClient

## Sample

## onOpen(arg, |)

The method that is executed when a solution opens. The default is -none-.

## Parameters

String argstartup argument part of the deeplink url with which the Client was started

Object| String> queryParams all query parameters of the deeplink url with which the Client was started, key>string if there was one value else key>Array<String>

## **Supported Clients**

SmartClient, WebClient, NGClient, MobileClient
