## Property Details

### dataProviderID

The dataprovider of the component.

#### Returns

[String](#)

#### Sample

```
var field = form.newTextField('parent_table_text', 1);
field.getTitle().dataProviderID = 'mytitlevar'
```

### displaysTags

Flag that enables or disables merging of data inside components using tags (placeholders). Tags (or placeholders) are words surrounded by %%on each side. There are data tags and standard tags. Data tags consist in names of dataproviders surrounded by%%. Standard tags are a set of predefined tags that are made available by the system.

See the "Merging data" section for more details about tags.

The default value of this flag is "false", that is merging of data is disabled by default.

#### Returns

[Boolean](#)

#### Sample

```
var field = form.newTextField('parent_table_text', 1);
field.getTitle().text = 'Parent table %%customername%%'
field.getTitle().displaysTags = true
```

### text

The text that is displayed inside the component.

#### Returns

[String](#)

#### Sample

```
var field = form.newTextField('parent_table_text', 1);
field.getTitle().text = 'Parent table'
```

### visible

The visible property of the component, default true.

#### Returns

[Boolean](#)

**Sample**

```
var field = form.newTextField('parent_table_text', 1);  
field.getTitle().visible = false
```
