

JSLogBuilder

Apr 03, 2024 23:25

Supported Clients

SmartClient WebClient NGClient

Methods Summary

void	log()	Logs an event without adding a message.
void	log(message, params)	Logs a message with or without parameters.
JSLogBuilder	withException(exception)	Includes an exception in the log event.

Methods Details

log()
Logs an event without adding a message.
This can be useful in combination with `withException(e)` if no message is required.

Supported Clients
SmartClient,WebClient,NGClient

Sample

```
var log = application.getLogger();
log.warn.withException(myException).log();
```

log(message, params)
Logs a message with or without parameters.

Parameters
[Object](#) message the message to log; the format depends on the message factory.
[Array](#) params parameters to the message.

Supported Clients
SmartClient,WebClient,NGClient

Sample

```
var log = application.getLogger();
log.warn.log("some message {} {} {}", "with", "multiple", "arguments");
```

withException(exception)
Includes an exception in the log event.

Parameters
[Object](#) exception The exception to log.

Returns
[JSLogBuilder](#) the LogBuilder.

Supported Clients
SmartClient,WebClient,NGClient

Sample

```
var log = application.getLogger();
log.warn.withException(myException).log("some message");
```
