Event Summary	
	onAfterCreate A method that is executed after a new record is created.
	onAfterDelete A method that is executed after a delete operation.
	onAfterFind A method that is executed after a foundset has switched to find mode.
	onAfterInsert A method that is executed after an insert operation.
	onAfterSearch A method that is executed after a search is executed for a foundset.
	onAfterUpdate A method that is executed after an update operation.
Boolean	onCreate A method that is executed before a record is created.
Boolean	onDelete A method that is executed before a delete operation.
Boolean	onFind A method that is executed before a foundset is going into find mode.
Boolean	onInsert A method that is executed before an insert operation.
Boolean	onSearch A method that is executed before search() is called on a foundset in find mode.
Boolean	onUpdate A method that is executed before an update operation.

Event Details	
onAfterCreate A method that is executed after a new record is created.	
Parameters <code>{JSRecord}</code> record - record that is created	
onAfterDelete A method that is executed after a delete operation.	
Parameters <code>{JSRecord}</code> record - record that is deleted	
onAfterFind A method that is executed after a foundset has switched to find mode.	
onAfterInsert A method that is executed after an insert operation.	
Parameters <code>{JSRecord}</code> record - record that is inserted	
onAfterSearch A method that is executed after a search is executed for a foundset.	
onAfterUpdate A method that is executed after an update operation.	
Parameters <code>{JSRecord}</code> record - record that is updated	
onCreate A method that is executed before a record is created. The method can block the creation by returning false.	
Returns <code>Boolean</code>	

onDelete

A method that is executed before a delete operation. The method can block the delete operation by returning false.

Parameters

{JSRecord} record - record that will be deleted

Returns

Boolean

onFind

A method that is executed before a foundset is going into find mode. The method can block the mode change.

Returns

Boolean

onInsert

A method that is executed before an insert operation. The method can block the insert operation by returning false.

Parameters

{JSRecord} record - record that will be inserted

Returns

Boolean

onSearch

A method that is executed before search() is called on a foundset in find mode. The method can block the search (foundset will stay in find mode).

Parameters

{Boolean} clearLastResults

{Boolean} reduceSearch

Returns

Boolean

onUpdate

A method that is executed before an update operation. A method can block the update by returning false.

Parameters

{JSRecord} record - record that will be updated

Returns

Boolean
