

ELEMENT_TYPES

Constants Summary	
String	ACCORDIONPANEL Constant representing a accordionpanel element.
String	BUTTON Constant representing an element of the Button type.
String	CALENDAR Constant representing an element of the Calendar type.
String	CHECK Constant representing an element of the Check type.
String	COMBOBOX Constant representing a combobox element.
String	FORM Constant representing a form element.
String	GROUP Constant representing a Group of elements.
String	HTML_AREA Constant representing a html area element.
String	IMAGE_MEDIA Constant representing an element of the ImageMedia type.
String	LABEL Constant representing an element of the Label type.
String	LISTBOX Constant representing a listbox element.
String	MULTISELECT_LISTBOX Constant representing a multi selection listbox element.
String	PASSWORD Constant representing an element of the Password type.
String	PORTAL Constant representing an element of the Portal type.
String	RADIOS Constant representing an element of the Radios type.
String	RECTANGLE Constant representing a rectangle element.
String	RTF_AREA Constant representing a rtf area of element.
String	SPINNER Constant representing a spinner element.
String	SPLITPANE Constant representing a splitpane element.
String	TABPANEL Constant representing an element of the Tabpanel type.
String	TEXT_AREA Constant representing an element of the TextArea type.
String	TEXT_FIELD Constant representing an element of the TextField type.
String	TYPE_AHEAD Constant representing a typeahead element.

Constants Details	
ACCORDIONPANEL Constant representing a accordionpanel element.	
Returns	String

Sample

```
//the return value for an element type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.ACCORDIONPANEL)
{
    // element is a accordion panel element
}
```

BUTTON

Constant representing an element of the Button type.

Returns

[String](#)

Sample

```
//the return value for an element of the Button type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.BUTTON)
{
    // element is a Button component
}
```

CALENDAR

Constant representing an element of the Calendar type.

Returns

[String](#)

Sample

```
//the return value for an element of the Calendar type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.CALENDAR)
{
    // element is a Calendar field
}
```

CHECK

Constant representing an element of the Check type.

Returns

[String](#)

Sample

```
//the return value for an element of the Check type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.CHECK)
{
    // element is a Check(box) field
}
```

COMBOBOX

Constant representing a combobox element.

Returns

[String](#)

Sample

```
//the return value for an element of the TextField type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.COMBOBOX)
{
    // element is a COMBOBOX element
}
```

FORM

Constant representing a form element.

Returns

[String](#)

Sample

```
//the return value for an element of the Form type, as returned by the following code
var renderElementType = event.getRenderable().getElementType();
if (renderElementType == ELEMENT_TYPES.FORM)
{
    // element is a type form element
}
```

GROUP

Constant representing a Group of elements.

Returns

[String](#)

Sample

```
//the return value for an element type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.GROUP)
{
    // element is a group element
}
```

HTML_AREA

Constant representing a html area element.

Returns

[String](#)

Sample

```
//the return value for an element of the TextField type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.HTML_AREA)
{
    // element is a HTML textarea
}
```

IMAGE_MEDIA

Constant representing an element of the ImageMedia type.

Returns

[String](#)

Sample

```
//the return value for an element of the ImageMedia type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.IMAGE_MEDIA)
{
    // element is a Image Media field
}
```

LABEL

Constant representing an element of the Label type.

Returns

[String](#)

Sample

```
//the return value for an element of the Label type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.LABEL)
{
    // element is a Label component
}
```

LISTBOX

Constant representing a listbox element.

Returns

[String](#)

Sample

```
//the return value for an element of the ListBox type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.LISTBOX)
{
    // element is a LISTBOX element
}
```

MULTISELECT_LISTBOX

Constant representing a multi selection listbox element.

Returns

[String](#)

Sample

```
//the return value for an element of the TextField type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.MULTISELECT_LISTBOX)
{
    // element is a MULTISELECT_LISTBOX element
}
```

PASSWORD

Constant representing an element of the Password type.

Returns

[String](#)

Sample

```
//the return value for an element of the Password type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.PASSWORD)
{
    // element is a Password component
}
```

PORTAL

Constant representing an element of the Portal type.

Returns

[String](#)

Sample

```
//the return value for an element of the Portal type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.PORTAL)
{
    // element is a Portal component
}
```

RADIOS

Constant representing an element of the Radios type.

Returns

[String](#)

Sample

```
//the return value for an element of the Radios type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.RADIOS)
{
    // element is a Radios field.
}
```

RECTANGLE

Constant representing a rectangle element.

Returns

[String](#)

Sample

```
//the return value for an element of the TextField type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.RECTANGLE)
{
    // element is a rectangle element
}
```

RTF_AREA

Constant representing a rtf area of element.

Returns

[String](#)

Sample

```
//the return value for an element of the TextField type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.RTF_AREA)
{
    // element is a RTF textarea.
}
```

SPINNER

Constant representing a spinner element.

Returns

[String](#)

Sample

```
//the return value for an element of the Spinner type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.SPINNER)
{
    // element is a SPINNER element
}
```

SPLITPANE

Constant representing a splitpane element.

Returns

[String](#)

Sample

```
//the return value for an element type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.SPLITPANE)
{
    // element is a splitpane element
}
```

TABPANEL

Constant representing an element of the Tabpanel type.

Returns

[String](#)

Sample

```
//the return value for an element of the Tabpanel type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.TABPANEL)
{
    // element is a Tabpanel component
}
```

TEXT_AREA

Constant representing an element of the TextArea type.

Returns

[String](#)

Sample

```
//the return value for an element of the TextArea type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.TEXT_AREA)
{
    // element is a TextArea field
}
```

TEXT_FIELD

Constant representing an element of the TextField type.

Returns

[String](#)

Sample

```
//the return value for an element of the TextField type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.TEXT_FIELD)
{
    // element is a text field
}
```

TYPE_AHEAD

Constant representing a typeahead element.

Returns

[String](#)

Sample

```
//the return value for an element of the TextField type, as returned by the following code
var etype = elements.elementName.getElementType();
if (etype == ELEMENT_TYPES.TYPE_AHEAD)
{
    // element is a type ahead element
}
```
