

dialogs

The Dialogs plugin provides a few convenient functions to quickly show a dialog. It supports the following types of dialogs:

- Error dialog
- Info dialog
- Input dialog
- Question dialog
- Select dialog
- Warning dialog

Currently this plugin is only supported in the Smart Client. [ServoyForge](#) hosts a drop-in replacement for the Dialogs plugin adds support for the same type of Dialogs and this plugin, but then equally supported in both the Smart and Web Client. This Dialogs module can be found [here](#).

Method Summary

String	showErrorDialog (dialogTitle, dialogMessage, buttonsText) Shows a message dialog with the specified title, message and a customizable set of buttons.
String	showInfoDialog (dialogTitle, dialogMessage, buttonsText) Shows a message dialog with the specified title, message and a customizable set of buttons.
