

i18n

Method Summary

<code>String[]</code>	<code>getAvailableTimeZoneIDs()</code>	Get the list of available time zones.
<code>String[]</code>	<code>getCountries()</code>	Gets the list of countries available for localization
<code>String</code>	<code>getCurrentCountry()</code>	Gets the current country; based on the current locale settings in the Servoy Client Locale preferences.
<code>String</code>	<code>getCurrentLanguage()</code>	Gets the current language; based on the current locale settings in the Servoy Client Locale preferences.
<code>String</code>	<code>getCurrentTimeZone()</code>	Gets the current time zone of the client; based on the current locale settings in the Servoy Client Locale preferences.
<code>String</code>	<code>getDefaultDateFormat()</code>	Gets the current default date format; based on the current locale settings in the Servoy Client Locale preferences.
<code>String</code>	<code>getDefaultNumberFormat()</code>	Gets the current default number format; based on the current locale settings in the Servoy Client Locale preferences.
<code>String</code>	<code>getI18NMessage(i18nKey)</code>	Gets the real message (for the clients locale) for a specified message key.
<code>String</code>	<code>getI18NMessage(i18nKey, dynamicValues)</code>	Gets the real message (for the clients locale) for a specified message key.
<code>JSDataset</code>	<code>getLanguages()</code>	Returns a dataset with rows that contains a language key (en) and the displayname (English) column.
<code>JSDataset</code>	<code>getSystemMessages()</code>	Returns a dataset with rows that contains 3 columns: 'key' (i18n key), 'reference' (reference text for that key) and 'locale ([CURRENT_LOCALE])' (where [CURRENT_LOCALE] is the current language) - with the system messages of servoy.
<code>Number</code>	<code>getTimeZoneOffset(timeZoneId)</code>	Returns the offset (in milliseconds) of this time zone from UTC for the current date or at the specified date.
<code>Number</code>	<code>getTimeZoneOffset(timeZoneId, date)</code>	Returns the offset (in milliseconds) of this time zone from UTC for the current date or at the specified date.
<code>String[]</code>	<code>getTimeZones()</code>	Returns an array of known timezones.
<code>void</code>	<code>setI18NMessage(i18nKey, value)</code>	Sets the value of i18n key for client scope,if value null the setting is removed.
<code>void</code>	<code>setLocale(language, country)</code>	Set/Overwrite the locale for this client.
<code>void</code>	<code>setTimeZone()</code>	Sets the current time zone of the client.

Method Details

getAvailableTimeZoneIDs

`String[] getAvailableTimeZoneIDs ()`

Get the list of available time zones.

Returns

`String[]`

Sample

```
//Get the list of available time zones
var timezones = i18n.getAvailableTimeZoneIDs();
```

getCountries

`String[] getCountries ()`

Gets the list of countries available for localization

Returns

`String[]` - a String array containing the available countries.

Sample

```
i18n.getCountries()
```

getCurrentCountry**String getCurrentCountry ()**

Gets the current country; based on the current locale settings in the Servoy Client Locale preferences.

NOTE: For more information on i18n, see the chapter on Internationalization (i18n) in the Servoy Developer User's Guide, beginning with the Introduction to i18n

Returns

String - a String representing the current country.

Sample

```
var currCountry = i18n.getCurrentCountry();
```

getCurrentLanguage**String getCurrentLanguage ()**

Gets the current language; based on the current locale settings in the Servoy Client Locale preferences.

NOTE: For more information on i18n, see the chapter on Internationalization (i18n) in the Servoy Developer User's Guide, beginning with the Introduction to i18n

Returns

String - a String representing the current language.

Sample

```
var currLang = i18n.getCurrentLanguage();
```

getCurrentTimeZone**String getCurrentTimeZone ()**

Gets the current time zone of the client; based on the current locale settings in the Servoy Client Locale preferences. For Servoy Web Clients the time zone is given by the browser (if it is possible to obtain it).

Returns

String - a String representing the current time zone.

Sample

```
var currTimeZone = i18n.getCurrentTimeZone();
```

getDefaultDateFormat**String getDefaultDateFormat ()**

Gets the current default date format; based on the current locale settings in the Servoy Client Locale preferences.

Returns

String - a String representing the default date format.

Sample

```
var dateFormat = i18n.getDefaultDateFormat();
```

getDefaultNumberFormat**String getDefaultNumberFormat ()**

Gets the current default number format; based on the current locale settings in the Servoy Client Locale preferences.

Returns

String - a String representing the default number format.

Sample

```
var numberFormat = i18n.getDefaultNumberFormat();
```

getI18NMessage**String getI18NMessage (i18nKey)**

Gets the real message (for the clients locale) for a specified message key.

Parameters

`{String} i18nKey` - The message key

Returns

`String` - a String that is the message for the message key.

Sample

```
// returns 'Welcome my_name in my solution'
// if the key 'mykey.username.text' is 'Welcome {0} in my solution'
i18n.getI18NMessage('mykey.username.text',new Array('my_name'))
```

getI18NMessage

`String getI18NMessage (i18nKey, dynamicValues)`

Gets the real message (for the clients locale) for a specified message key.

You can use parameter substitution by using {n}, where n is a index number of the value thats in the arguments array.

Parameters

`{String} i18nKey` - The message key

`{Object[]}` dynamicValues - Arguments array when using parameter substitution.

Returns

`String` - a String that is the message for the message key.

Sample

```
// returns 'Welcome my_name in my solution'
// if the key 'mykey.username.text' is 'Welcome {0} in my solution'
i18n.getI18NMessage('mykey.username.text',new Array('my_name'))
```

getLanguages

`JSDataSet getLanguages ()`

Returns a dataset with rows that contains a language key (en) and the displayname (English) column.

See <http://www.ics.uci.edu/pub/ietf/http/related/iso639.txt> for a list that could be returned.

Returns

`JSDataSet` - a JSDataSet with all the languages.

Sample

```
var set = i18n.getLanguages();
for(var i=1;i<=set.getMaxRowIndex();i++)
{
    application.output(set.getValue(i, 1) + " " + set.getValue(i, 2));
}
```

getSystemMessages

`JSDataSet getSystemMessages ()`

Returns a dataset with rows that contains 3 columns: 'key' (i18n key), 'reference' (reference text for that key) and 'locale ([CURRENT_LOCALE])' (where [CURRENT_LOCALE] is the current language) - with the system messages of servoy.

This means all servoy messages, with all available translations.

Returns

`JSDataSet` - a JSDataSet with all the system messages.

Sample

```
var set = i18n.getSystemMessages();
for(var i=1;i<=set.getMaxRowIndex();i++)
{
    application.output(set.getValue(i, 1) + " " + set.getValue(i, 2)+ " " + set.getValue(i, 3));
}
```

getTimeZoneOffset

`Number getTimeZoneOffset (timeZoneId)`

Returns the offset (in milliseconds) of this time zone from UTC for the current date or at the specified date.

Parameters

{String} timeZoneld - The time zone to get the offset for.

Returns

Number - an int representing the time zone's offset from UTC.

Sample

```
var timeZoneOffset = i18n.getTimeZoneOffset('America/Los_Angeles');
```

getTimeZoneOffset

Number **getTimeZoneOffset** (timeZoneld, date)

Returns the offset (in milliseconds) of this time zone from UTC for the current date or at the specified date.

Parameters

{String} timeZoneld - The time zone to get the offset for.

{Date} date - The date in the time zone (default current date). Needed in case daylight saving time/GMT offset changes are used in the time zone.

Returns

Number - an int representing the time zone's offset from UTC.

Sample

```
var timeZoneOffset = i18n.getTimeZoneOffset('America/Los_Angeles');
```

getTimeZones

String[] **getTimeZones** ()

Returns an array of known timezones.

Returns

String[] - an Array with all the timezones.

Sample

```
var timeZones = i18n.getTimeZones();
```

setI18NMessage

void **setI18NMessage** (i18nKey, value)

Sets the value of i18n key for client scope, if value null the setting is removed.

All forms not yet loaded will change (execute this in solution startup or first form)

Parameters

{String} i18nKey - The message key

{String} value - They value for the message key.

Returns

void

Sample

```
//sets the value of i18n key for client scope; if value null the setting is removed
//Warning: already created form elements with i18n text lookup will not change,
//so call this method in the solution startup method or in methods from first form
//this method saves message for current locale, so if locale is changed with setLocale, all messages set
from scripting will be lost

i18n.setI18NMessage('mykey.username.text', 'my_name')
```

setLocale

void **setLocale** (language, country)

Set/Overwrite the locale for this client.

All forms not yet loaded will change (execute this in solution startup or first form).

The language must be a lowercase 2 letter code defined by ISO-639.

see <http://www.ics.uci.edu/pub/ietf/http/related/iso639.txt>

The country must be an upper case 2 letter code defined by IS-3166

see http://www.chemie.fu-berlin.de/diverse/doc/ISO_3166.html

NOTE: For more information on i18n, see the chapter on Internationalization (i18n) in the Servoy Developer User's Guide, beginning with the Introduction to i18n

Parameters

{String} language - The lowercase 2 letter code

{String} country - The upper case 2 letter code.

Returns

void

Sample

```
//Warning: already created form elements with i18n text lookup will not change,  
//so call this method in the solution startup method or in methods from first form  
  
i18n.setLocale('en','US');
```

setTimeZone

void **setTimeZone**()

Sets the current time zone of the client.

The parameter should be a string having the format which can be retrieved via i18n.getAvailableTimeZones or can be seen in the SmartClient Edit -> Preferences -> Locale at the "Default Timezone" combobox.

For instance the time zone for Netherlands is set using the ID "Europe/Amsterdam".

Returns

void

Sample

```
// This will set the default time zone to Central European Time  
i18n.setTimeZone("Europe/Amsterdam");
```
