
Servoy Runtime Client

The Servoy Runtime Client is a stand-alone, single-user version of a solution in a native application. It does not require a Servoy Application Server to operate.

It has a [PostgreSQL](#) database built-in and can be run locally from hard drive, USB drive or CD/DVD.

The Servoy Runtime Client is designed as the solution for sending out single-user productivity solutions, electronic catalogs and other information-rich software.

The Runtime Client is available for both Windows, Mac OS X and Linux.

For more information on the Servoy Runtime Client, see [Runtime Client](#).
