

Bean

Property Summary

Number	anchors Enables a component to stick to a specific side of form and/or to grow or shrink when a window is resized.
Object	designTimeProperties Property to get and add design-time properties for a component.
Boolean	enabled The enable state of the component, default true.
Number	formIndex
String	location The x and y position of the component, in pixels, separated by a comma.
String	name The name of the component.
Boolean	printable Flag that tells if the component should be printed or not when the form is printed.
String	size The width and height (in pixels), separated by a comma.
Number	tabSeq An index that specifies the position of the component in the tab sequence.
Boolean	visible The visible property of the component, default true.

Property Details

anchors

Enables a component to stick to a specific side of form and/or to grow or shrink when a window is resized.

If opposite anchors are activated then the component will grow or shrink with the window. For example if Top and Bottom are activated, then the component will grow/shrink when the window is vertically resized. If Left and Right are activated then the component will grow/shrink when the window is horizontally resized.

If opposite anchors are not activated, then the component will keep a constant distance from the sides of the window which correspond to the activated anchors.

Returns

[Number](#)

designTimeProperties

Property to get and add design-time properties for a component.

Returns

[Object](#) - map of the design-time properties

enabled

The enable state of the component, default true.

Returns

[Boolean](#) - enabled state

formIndex

Returns

[Number](#)

location

The x and y position of the component, in pixels, separated by a comma.

Returns

[String](#)

name

The name of the component. Through this name it can also accessed in methods.

Returns

[String](#)

printable

Flag that tells if the component should be printed or not when the form is printed.

By default components are printable.

Returns

[Boolean](#)

size

The width and height (in pixels), separated by a comma.

Returns

[String](#)

tabSeq

An index that specifies the position of the component in the tab sequence. The components are put into the tab sequence in increasing order of this property. A value of 0 means to use the default mechanism of building the tab sequence (based on their location on the form). A value of -2 means to remove the component from the tab sequence.

Returns

[Number](#)

visible

The visible property of the component, default true.

Returns

[Boolean](#) - visible property
